FAUNA & FLORA INTERNATIONAL

Innovative conservation since 1903

BECOME A LIFE MEMBER AND YOU'LL JOIN PRESTIGIOUS COMPANY

Become a Life member of Fauna & Flora International to show an extraordinary commitment to an organisation that has been at the forefront of conservation for over 100 years.

Since its inception in 1903 as the world's first international conservation organisation Fauna & Flora International has been working tirelessly for the preservation of plants and animals across the world. For over 100 years Life Members have provided the support and commitment that has helped us to achieve so much, not least key achievements such as:

- Reintroducing the Arabian oryx to the wild
- Establishing the International Gorilla Conservation Programme
- Establishing Viet Nam's first locally managed conservation organisation

Collaboration is key to our approach, and wherever possible we work with other global conservation organisations to ensure we are effective and efficient. That's why in 2015 we moved into the David Attenborough Building of the Cambridge Conservation Initiative with several other global conservation groups. Now we are asking you to be part of our wider collaborative work by becoming a Life Member.

As a Life Member you will receive *Oryx—The International Journal of Conservation* and our annual magazine *Fauna & Flora*, and you will also be invited to special events, where you can network with some of the world's leading conservationists. You will be joining a select group of supporters who have shown an extraordinary commitment to international conservation.

By joining Fauna & Flora International as a Life Member with a one-off payment of £1,500 you will be making a genuine difference to our conservation work and will forever be part of our global conservation organisation.

To join as a Life Member, you can:

Call us on **+44 (0)1223 749 019**
Email us at **members@fauna-flora.org**

FAUNA & FLORA INTERNATIONAL

Innovative conservation since 1903

ABOUT FAUNA & FLORA INTERNATIONAL

Fauna & Flora International (FFI) protects threatened species and ecosystems worldwide, choosing solutions that are sustainable, based on sound science and take account of human needs. Operating in more than 50 countries worldwide, FFI saves species from extinction and habitats from destruction, while improving the livelihoods of local people. Founded in 1903, FFI is the world's longest established international conservation body and a registered charity.

PLEASE SUPPORT OUR CONSERVATION EFFORTS

Your support helps us continue our vital work to protect biodiversity all over the world. From conservation of the last remaining Sumatran tigers to protection of the mountain gorilla, or replanting the Niedzwetzky apple, FFI is doing everything it can to ensure that threatened species are not lost. We could not do this without the generous support of many individuals.

Choose to donate to us and we will regularly keep you up to date with how we spend the money we receive, sending you ongoing communications such as campaign updates and emails – if you want them of course.

So please consider making a contribution to our work today – and helping us ensure a sustainable future for threatened species of plants and animals everywhere.

If you would like to make a donation to Fauna & Flora International, just go to **www.fauna-flora.org/donate** or call **+44 (0) 1223 749 019**.

The International Journal of Conservation

Oryx

oryxthejournal.org

Guidelines for authors

Before submitting material to *Oryx—The International Journal of Conservation* please carefully read and follow the journal's full Guidelines for authors (including the Aims and scope, Guidelines for preparation of manuscripts, figures and plates, and the Guidelines on ethical standards) at oryxthejournal.org.

How to submit a manuscript

By submitting an article to *Oryx* you join an international community of conservation practitioners, researchers and academics. Necessarily high standards mean that not all manuscripts are accepted, but following the advice in the Guidelines for authors at oryxthejournal.org will facilitate your submission. To submit material to the journal you will need to create an account at mc.manuscriptcentral.com/oryx. All article types, Letters, replies to Letters and Conservation News items must be submitted online. During the submission you will be asked to indicate that the submitted manuscript has not been published, or submitted for publication, elsewhere, that all authors have abided by the Guidelines on ethical standards, and that all authors have read the submitted manuscript and agreed to its submission. You will then be given a unique reference number that you must use in all correspondence with the Editorial Office, always including it in the subject line of any e-mail so that we can respond promptly.

General instructions

See the full Guidelines for authors at oryxthejournal.org for details of the types of articles that *Oryx* considers, manuscript requirements, the prescription for the presentation of text, tables, figures, plates and supplementary material, and other relevant matters.

Open access

Cambridge University Press gives authors the option to make their articles freely available to everyone, immediately on publication, in exchange for a one-off charge paid either by the authors or by their associated funding body. Payment of this one-off fee entitles permanent archiving both by Cambridge University Press and by the author, and enables anyone else to view, download and use an article in accordance with the applicable Creative Commons licence. See oryxthejournal.org for full details.

Guidelines for preparation of figures and plates

For detailed guidance on designing maps and data plots, advice on the wise use of graphics formats, and video screencast demonstrations to help with drafting beautiful figures, please see the journal's online *Writing for Conservation* guide. Figures are printed at widths of 82, 115 and 171 mm (3.2, 4.5 and 6.7 inches, respectively); wherever possible, design for the narrower widths. See recent issues of the journal for examples of suitably designed figures. Plates (i.e. photographs) are usually printed at 82 mm width. On initial submission figures and plates can be at low to medium resolution as long as they are legible. For accepted articles we require figures and plates at publication quality. We welcome colour figures and plates but they can be printed only at the author's expense; contact the Editorial Office for a costing. Figures and plates can, however, be published in colour online and greyscale in print at no cost to the author; in such cases authors need to ensure that any colour graphic will also reproduce well in greyscale. See oryxthejournal.org for the full guidelines.

Guidelines on ethical standards

We believe it is important that conservation research conforms to the highest possible ethical and legal standards, and the journal therefore has Guidelines on ethical standards. When you submit an article for consideration by *Oryx* you will be required to assent that all authors on the article have abided by these guidelines. See oryxthejournal.org for the full text.

How to submit other material

Oryx is well known for its coverage of international conservation news and related matters, and we welcome contributions to these sections of the journal. Send all prospective Briefly news and details of Grants & Opportunities to the Editorial Office. To submit Letters, replies to Letters and Conservation News items see oryxthejournal.org. Deadlines for material for the Briefly (news items <6 months old and <150 words in length summarizing recent conservation developments that have been published by authoritative sources, including websites), Conservation News (major recent developments, <6 months old and <700 words, in conservation or important announcements that have not been published elsewhere) and Grants & Opportunities (short descriptions, <350 words, of grants and funding opportunities for conservationists) sections are 1 October, 1 December, 1 February, 1 April, 1 June and 1 August for the January, March, May, July, September and November issues, respectively. See oryxthejournal.org for full details.

October 2019

595 What do you know about conservation and human rights? *H. Newing & A. Perram*
597 Briefly
607 Conservation news

Carnivore conservation

611 Does the Vulnerable sun bear *Helarctos malayanus* damage crops and threaten people in oil palm plantations? *R. Guharajan, N.K. Abram, M.A. Magguna, B. Goossens, S.T. Wong, S.K.S.S. Nathan & D.L. Garshelis*
620 Assessing changes in distribution of the Endangered snow leopard *Panthera uncia* and its wild prey over 2 decades in the Indian Himalaya through interview-based occupancy surveys, *A. Ghoshal, Y.V. Bhatnagar, B. Pandav, K. Sharma, C. Mishra, R. Raghunath & K.R. Suryawanshi*
633 Visitors' willingness to pay for snow leopard *Panthera uncia* conservation in the Annapurna Conservation Area, Nepal, *M.G. Schutgens, J.H. Hanson, N. Baral & S.B. Ale*
643 Responses of Sunda clouded leopard *Neofelis diardi* population density to anthropogenic disturbance: refining estimates of its conservation status in Sabah, *A.J. Hearn, J. Ross, H. Bernard, S.A. Bakar, B. Goossens, L.T.B. Hunter & D.W. Macdonald*
654 Population density estimates and conservation concern for clouded leopards *Neofelis nebulosa*, marbled cats *Pardofelis marmorata* and tigers *Panthera tigris* in Htamanthi Wildlife Sanctuary, Sagaing, Myanmar, *H. Naing, J. Ross, D. Burnham, S. Htun & D.W. Macdonald*
663 Conservation implications for the Himalayan wolf *Canis (lupus) himalayensis* based on observations of packs and home sites in Nepal, *G. Werhahn, N. Kusi, C. Sillero-Zubiri & D.W. Macdonald*

Hunting and conservation

670 What do we know about the life-history traits of widely hunted tropical mammals? *N. van Vliet & R. Nasi*
677 Does forest management and researchers' presence reduce hunting and forest exploitation by local communities in Tsitongambarika, south-east Madagascar? *M. Campera, M. Phelps, F. Besnard, M. Balestri, T.M. Eppley, V. Nijman & G. Donati*
687 Hunting of mammal species in protected areas of the southern Bahian Atlantic Forest, Brazil, *L.C. Castilho, K.M. De Vleeschouwer, E.J. Milner-Gulland & A. Schiavetti*
698 The killing of Cecil the Lion as an impetus for policy change, *S. Carpenter & D.M. Konisky*
707 Who benefits from ecosystem services? Analysing recreational moose hunting in Vermont, USA, *N. Grima, B. Fisher, T.H. Ricketts & L.J. Sonter*

Golden-brown mouse lemur

716 Molecular edge effects in the Endangered golden-brown mouse lemur *Microcebus ravelobensis, U. Radespiel, J. Schulte, R.J. Burke & S.M. Lehman*
727 The effects of a national highway on the Endangered golden-brown mouse lemur *Microcebus ravelobensis* in Ankarafantsika National Park, Madagascar, *M.S. Ramsay, A. Razafindrakoto & S.M. Lehman*
732 The conservation costs and economic benefits of using biodiversity offsets to meet international targets for protected area expansion, *F.T. Buschke, S. Brownlie & J. Manuel*
741 IUCN's encounter with 007: safeguarding consensus for conservation, *S.N. Stuart, S. Al Dhaheri, E.L. Bennett, D. Biggs, A. Bignell, O. Byers et al.*
748 New populations of pampas deer *Ozotoceros bezoarticus* discovered in threatened Amazonian savannah enclaves, *D.G. Rocha, A. Vogliotti, D.M. Gräbin, W.R.C. Assunção, B.C. Cambraia, A.R. D'Amico et al.*
752 The mismatch between location of protected areas and suitable habitat for the Vulnerable taruka *Hippocamelus antisensis, C. Mata, N. Fuentes-Allende, J.E. Malo, A. Vielma & B.A. González*
757 The status of African elephant *Loxodonta africana* populations in South Africa, *Y. Pretorius, M.E. Garaï & L.A. Bates*
764 Status of terrestrial mammals at the Kafue–Zambezi interface: implications for transboundary connectivity, *R. Lines, J. Tzanopoulos & D. MacMillan*
774 Conservation of chimpanzees *Pan troglodytes verus* and other primates depends on forest patches in a West African savannah landscape, *A. Binczik, P. Roig-Boixeda, E.W. Heymann & M. Waltert*
782 Rapid responses against invasive species on islands: lessons from the introduced Barbary ground squirrel *Atlantoxerus getulus* in the Canary Islands, *F.M. Medina, M. López-Darias & J.C. Piquet*
787 Halting the release of the pangolin *Manis javanica* in China—CORRIGENDUM, *F. Zhang, Y. Yu, W. Wang, N. Xu & S. Wu*

Cover There is concern about how forest-dependent species such as the Vulnerable sun bear can persist in the fragmented landscape of Borneo, where much forest has been converted to oil palm plantations. Evidence suggests that sun bears are rarely encountered in these plantations and do not damage the oil palm crop, although they are generally feared. Plantations do not provide the diversity of food and cover available in a natural forest. For further details, see pp. 611–619. (Photograph ©Viktor Cap/Alamy).
