Preface *page* xv
Note on the Text xix
List of Abbreviations xxxii

1 Clouds 1
1.1 Formation, Distribution, and Importance of Clouds 1
1.1.1 Definition and Formation of Clouds 1
1.1.2 Global Cloud Coverage 2
1.2 Macroscopic Cloud Properties and Cloud Types 5
1.2.1 Low Layered Clouds 7
1.2.2 Low Clouds with Vertical Extent 10
1.2.3 Mid-Level Clouds 12
1.2.4 High Clouds 13
1.2.5 Other Cloud Types 17
1.2.6 Fog and High Fog 19
1.3 Global Coverage of Individual Cloud Types and Cloud Regimes 21
1.3.1 Clouds at Different Altitudes 21
1.3.2 Individual Cloud Types 22
1.3.3 Cloud Regimes in the Framework of the Global Circulation 24
1.4 Microphysical Cloud Properties 27
1.4.1 Cloud Phase 27
1.4.2 Size Distributions of Hydrometeors 30
1.5 Temporal and Spatial Scales of Cloud Systems and Atmospheric Phenomena 36

2 Atmospheric Radiation, Energy Budget, and Optical Phenomena 38
2.1 Radiation in the Atmosphere 38
2.1.1 The Spectrum of Solar and Terrestrial Radiation 38
2.1.2 Black body Radiation 38
2.1.3 Scattering 40
2.1.4 Radiative Transfer 43
2.2 Energy Balance of the Earth-Atmosphere System 45
2.2.1 Energy Balance at the Top of Earth's Atmosphere 45
2.2.2 Energy Balance within Earth's Atmosphere 47
2.2.3 Energy Balance at Earth's Surface 49

Published online by Cambridge University Press

2.3 Cloud Radiative Effects 51
2.4 Optical Phenomena 56
2.4.1 Blue and Red Sky (Rayleigh Scattering) 56
2.4.2 Coronas and Glories (Lorenz-Mie Scattering) 57
2.4.3 Rainbows (Geometric Optics) 58
2.4.4 Halos (Geometric Optics) 65

3 Thermodynamics 67
3.1 Basic Definitions 67
3.1.1 Thermodynamic States and State Variables 67
3.1.2 Extensive and Intensive Variables 68
3.1.3 Open, Closed, and Isolated Systems 69
3.1.4 Thermodynamic Equilibrium 69
3.1.5 Reversible and Irreversible Processes 71
3.2 Dry Air 73
3.2.1 Ideal Gas Law 73
3.2.2 Partial Pressure 74
3.2.3 First Law of Thermodynamics 75
3.2.4 Special Processes 78
3.2.5 The Carnot Process 79
3.2.6 Adiabatic Processes 82
3.2.7 Specific Entropy 83
3.3 Thermodynamic Charts 84
3.4 Thermodynamics of Phase Transitions 86
3.4.1 The Role of the Gibbs Free Energy in Phase Transitions 86
3.4.2 Phase Transitions in Thermodynamic Equilibrium: The Clausius–Clapeyron Equation 89
3.4.3 The Phase Diagram of Bulk Water 91
3.4.4 Saturation Water Vapor Pressure Over Liquid Water 92
3.4.5 Saturation Water Vapor Pressure Over Ice 93
3.4.6 Temperature Dependencies of Latent Heat and Empirical Parameterizations of Saturation Water Vapor Pressure Over Liquid Water and Ice 94
3.5 Moist Air 97
3.5.1 Water in the Atmosphere 97
3.5.2 Water Vapor Mass Mixing Ratio and Specific Humidity 98
3.5.3 Relative Humidity 98
3.5.4 Virtual Temperature 100
3.5.5 Dew Point Temperature 102
3.5.6 Lifting Condensation Level and Isentropic Condensation Temperature 104
3.5.7 Wet-bulb Temperature and Wet-bulb Potential Temperature 105
3.5.8 Equivalent Potential Temperature and Equivalent Temperature 107

Published online by Cambridge University Press

3.5.9 Saturation Equivalent Potential Temperature and Saturation Equivalent Temperature 109
3.5.10 Wet Adiabatic Processes 111

4 Atmospheric Dynamics and Stability 113
4.1 Navier–Stokes Equation 113
4.2 Vertical Air Motions 116
4.2.1 Hydrostatic Equation 116
4.2.2 Hypsometric Equation 117
4.2.3 Buoyancy Force 117
4.3 Static Stability in Water-subsaturated Air 119
4.3.1 Dry Adiabatic Lapse Rate 121
4.3.2 Dry Adiabatic Lapse Rate and Static Stability 121
4.3.3 Brunt–Väisälä Frequency 122
4.4 Static Stability in Condensing Air 124
4.5 Instability of Layers 129
4.6 Horizontal Air Motions 131
4.6.1 Gradient Wind 131
4.6.2 Geostrophic Wind 132
4.6.3 Cyclostrophic Wind 134
4.6.4 Horizontal Wind with Friction 135
4.6.5 Thermal Wind 136
4.6.6 Inertial Instability 137
4.7 Slantwise Displacement 140

5 Mixing and Convection 144
5.1 Mixing 144
5.2 Convection 147
5.2.1 Level of Free Convection 148
5.2.2 Dry Convection 148
5.2.3 Moist Convection 151
5.2.4 Convective Condensation Level 151
5.2.5 Elementary Parcel Theory 155
5.2.6 Modification of the Elementary Parcel Theory 158

6 Atmospheric Aerosol Particles 166
6.1 Chemical and Physical Properties of Aerosol Particles 167
6.1.1 Chemical Properties 167
6.1.2 Physical Properties 168
6.2 Aerosol Size Distributions 172
6.2.1 Discrete Size Distributions 172
6.2.2 Size Distribution Function 173

Published online by Cambridge University Press

6.2.3 Logarithmic Normal Size Distributions 175
6.2.4 Surface, Volume, and Mass Size Distributions 176
6.2.5 Observed Atmospheric Aerosol Size Distributions 178
6.3 Aerosol Sources and Emissions 180
6.3.1 Formation Mechanisms of Aerosol Particles 180
6.3.2 Aerosol Emissions 184
6.4 Aerosol Sinks 188
6.4.1 Wet Scavenging 188
6.4.2 Dry Scavenging 195
6.4.3 Atmospheric Processing of Aerosol Particles 197
6.5 Burden and Lifetime of Aerosols 198
6.6 Summary of Aerosol Processes 201

7 Cloud Droplet Formation and Köhler Theory 203
7.1 Nucleation 203
7.1.1 Initiation of Phase Transitions 204
7.1.2 Cluster Formation 206
7.2 Kelvin Equation 210
7.3 Hygroscopic Growth 214
7.3.1 Efflorescence/Crystallization and Deliquescence of Multicomponent Systems 217
7.3.2 Water Uptake and Loss of Amorphous Solids 219
7.4 Raoult's Law 219
7.5 Köhler Curve 224
7.5.1 Köhler Curve: Stable and Unstable Equilibria 226
7.5.2 The Role of Particle Size and Chemistry for Köhler Activation 230
7.6 Concept and Measurements of Cloud Condensation Nuclei 235
7.7 Summary of Cloud Droplet Formation by Köhler Activation 237

8 Microphysical Processes in Warm Clouds 241
8.1 Droplet Growth by Diffusion and Condensation 242
8.1.1 Diffusion Equation for Water Vapor 242
8.1.2 Heat Conduction Equation 244
8.1.3 Droplet Growth Equation 246
8.1.4 Solution of the Droplet Growth Equation 249
8.1.5 Growth of a Droplet Population 251
8.1.6 Application of the Droplet Growth Equation 251
8.2 Droplet Growth by Collision–Coalescence 254
8.2.1 Collision and Coalescence Efficiencies 256
8.2.2 Terminal Velocity of Cloud Droplets and Raindrops 257
8.2.3 Growth Model for Continuous Collection 262
8.2.4 Growth Model for Stochastic Collection 265

Published online by Cambridge University Press

8.2.5 Speed-up of Collision-Coalescence Due to Giant Cloud Condensation Nuclei and Turbulence 266
8.3 Evaporation and Break-up of Raindrops 268
8.3.1 Evaporation of Cloud Droplets and Raindrops 268
8.3.2 Maximum Raindrop Size 269
8.3.3 Conditions Leading to Raindrop Break-up 271
8.3.4 Types of Raindrop Break-up 272
8.3.5 Summary of Processes in a Warm Cloud 274

9 Microphysical Processes in Cold Clouds 276
9.1 Ice Nucleation (Primary Ice Production) 277
9.1.1 Homogeneous Ice Nucleation 278
9.1.2 Heterogeneous Ice Nucleation 287
9.1.3 Pore Condensation and Freezing 291
9.1.4 Stochastic Versus Deterministic Ice Nucleation 292
9.1.5 Ice-nucleating Particles (INPs) 293
9.1.6 Measurements of Ice-nucleating Particles 296
9.2 Ice Crystal Habits 298
9.3 Ice Crystal Growth 302
9.3.1 Growth by Diffusion 302
9.3.2 Terminal Velocity of Ice Crystals, Snowflakes, and Graupel 304
9.3.3 Growth of Ice Crystals Involving Collisions 306
9.4 Ice Multiplication (Secondary Ice Production) 309
9.5 Melting and Sublimation of Ice Particles 311
9.6 Summary of Microphysical Processes in Warm and Cold Clouds 311

10 Precipitation 314
10.1 Number Size Distributions of Hydrometeors 314
10.1.1 Raindrop Number Size Distribution 314
10.1.2 Snowflake Number Size Distribution 317
10.2 Precipitation Rates 318
10.3 Radar 319
10.3.1 Radar Reflectivity 321
10.3.2 Relation of Radar Reflectivity to Precipitation Rate 323
10.3.3 Radar Images 324
10.4 Types of Precipitation 326
10.4.1 Stratiform Precipitation 327
10.4.2 Convective Precipitation 331
10.5 Synoptic and Mesoscale Structure of Precipitation 333
10.5.1 Norwegian Model of Extratropical Cyclones 334
10.5.2 Conveyor Belt Approach 336
10.5.3 Orographic Precipitation 337

Published online by Cambridge University Press

10.6 Precipitation in the Present and Future Climate 339
10.6.1 Clouds and Precipitation in Earth's Hydrological Cycle 339
10.6.2 Distribution of Precipitation Type and Amount in the Current Climate 340
10.6.3 Trends in Past and Future Precipitation 341
10.6.4 Extreme Precipitation 343
10.7 Artificial Weather Modification 344

11 Convective Storms and Cloud Dynamics 346
11.1 Ordinary-Cell Convective Storms 347
11.2 Multicell and Supercell Convective Storms 350
11.2.1 Vorticity 352
11.2.2 Multicell Storms 357
11.2.3 Supercell Storms 359
11.2.4 Unidirectional Versus Turning Wind Shear 363
11.2.5 Tornadoes 365
11.3 Mesoscale Convective Systems 370
11.3.1 Quasi-linear Convective Systems: Squall Lines 371
11.3.2 Mesoscale Convective Complexes 374
11.4 Hail and Lightning 374
11.4.1 Hail 374
11.4.2 Hail Suppression 376
11.4.3 Global Electrical Circuit 377
11.4.4 Charge Separation Within Clouds 379
11.4.5 Cloud-to-Ground Lightning 381
11.4.6 Global Distribution of Hail and Lightning 384
11.5 Tropical Cyclones 386
11.5.1 General Characteristics 386
11.5.2 Prerequisites for Tropical Cyclone Formation 388
11.5.3 Lifecycle and Lifetime of TCs 390
11.5.4 Circulation Within a Tropical Cyclone 391
11.5.5 Tropical Cyclone as a Carnot Heat Engine 395
11.5.6 Decay of Tropical Cyclones 396
11.5.7 Differences between Tropical and Extratropical Cyclones 397
11.6 Severe Convective Storms and Tropical Cyclones in a Warming Climate 399

12 Aerosols and Clouds in the Climate System 402
12.1 Aerosol Radiative Forcing 404
12.1.1 Effective Radiative Forcing due to Aerosol–Radiation Interactions 404
12.1.2 Effective Radiative Forcing due to Aerosol–Cloud Interactions 408
12.1.3 Comparison of Radiative Forcings 414
12.2 Observed Trends in Total Cloud Cover 417

Published online by Cambridge University Press

12.3 Climate Feedbacks at the Time of a Doubling of CO_2 419
12.3.1 Planck feedback 420
12.3.2 Water Vapor, Lapse Rate, and Surface-Albedo Feedback 421
12.3.3 Cloud Feedbacks 422
12.3.4 Sum of all Feedbacks 427
12.4 Climate Intervention Involving Aerosol Particles and Clouds 427
12.4.1 Stratospheric Aerosol Injections 428
12.4.2 Marine Cloud Brightening 430
12.4.3 Cloud Thinning 430
12.4.4 Summary of the Climate Intervention Discussion 434

Appendix 435
A.1 Tephigram 435
A.2 Psychrometric Chart 436
A.3 Parameterizations of Thermodynamic Properties as a Function of Temperature and Pressure 436
A.3.1 Density of Liquid Water as a Function of Temperature 437
A.3.2 Density of Ice as a Function of Temperature 437
A.3.3 Specific Heat of Dry Air as a Function of Temperature 437
A.3.4 Specific Heat of Water Vapor as a Function of Temperature 438
A.3.5 Specific Heat of Liquid Water as a Function of Temperature 438
A.3.6 Specific Heat of Ice as a Function of Temperature 438
A.3.7 Dynamic Viscosity of Air as a Function of Temperature 438
A.3.8 Interfacial Tensions as a Function of Temperature 438
A.4 Chemical and Physical Properties 439
