Tables

2.1 Corpus for the terminological case study *page* 20
2.2 Terms considered in the analysis 22
2.3 Absolute and normalised frequencies of 'canonicity', 'markedness', and 'syntactic variation' in six linguistic journals as well as range across articles within each journal 27
2.4 Right collocates of 'marked for' and 'unmarked for' occurring at least three times in the corpus 30
2.5 Normalised frequencies (per 100 articles) and range (% of articles in which the term occurred) of 'canonical', 'non-canonical', 'marked', 'unmarked', 'standard', and 'non-standard' in six journals 35
2.6 Top five bigrams with the target item in the left position 36
4.1 Subject positions in the four corpora of historical English 72
4.2 Subject positions and clause-initial elements in *YCOE* 75
4.3 Subject positions and clause-initial elements in *PPCME2* 77
4.4 Subject positions and clause-initial elements in *PPCEME* 79
4.5 Subject positions and types of verbs in *PPCEME* 81
4.6 Subject positions and subject length in *PPCEME* 81
4.7 Subject positions and clause-initial elements in *PPCMBE* 83
4.8 Subject positions and subject length in *PPCMBE* 84
5.1 Frequency of all existential *there*-constructions in the *OBC* (absolute and per million words/pmw), divided by five 40-year periods 94
5.2 Frequency of contracted *there's* in existential *there*-constructions in the *OBC* (absolute and per million words/pmw), divided by five 40-year periods 94
5.3 Singular *BE* with plural notional subjects in the *CEECE*, relative frequencies 98

Downloaded from https://www.cambridge.org/core. UNIVERSIDAD AUTONOMA METROPOLITANA, on 15 Nov 2026 at 21:22:31, subject to the Cambridge Core terms of use, available at https://www.cambridge.org/core/terms. https://doi.org/10.1017/9781108863858

5.4 Singular *BE* with plural notional subjects in two *OBC* periods matching Nevalainen's (2009) periodisation, absolute and relative frequencies 99
5.5 Singular *BE* with plural notional subjects, breakdown of *OBC* periods, absolute and relative frequencies 99
5.6 Existential constructions with plural notional subjects in the two *OBC* subperiods; frequencies: absolute, pmw, relative (where applicable) 100
5.7 Agreement patterns in existential *there*-constructions containing *number* (*there * a number of*. . ., N = 341; absolute and relative frequencies) 104
5.8 Agreement patterns in existential *there*-constructions containing *many* (*there * many*. . ., N = 494; absolute and relative frequencies) 105
5.9 Agreement patterns in existential *there*-constructions containing *dozen* (*there * * dozen* . . ., N = 92; absolute and relative frequencies) 105
5.10 Agreement patterns in existential *there*-constructions with coordinated notional subjects (*there * NN and NN*, N = 706, 682 tokens with date; absolute and relative frequencies) 106
6.1 The most prolific users of the demonstrative ProTag construction in the *Chadwyck–Healey English Drama Collection* 118
6.2 The ten most common evaluative expressions that co-occur with demonstrative ProTags in the *Chadwyck–Healey English Drama Collection* 126
8.1 Summary of the 2018 TVNB Corpus 167
9.1 Summary of cleft types 184
9.2 Composition of the EVLA-Corpus and word count 191
9.3 Cleft-related variables and levels used in data annotation 192
9.4 Evaluation-related variables and levels used in data annotation 193
10.1 Points of measurement in self-paced reading experiment 217
10.2 Mean reaction times in milliseconds and standard deviations (SD) 219
10.3 Mean ratings and standard deviations (SD) across conditions in Experiment 2 227
10.4 Fixed effect structure of final model for PrepRTSc (spillover region) 231

Downloaded from https://www.cambridge.org/core. UNIVERSIDAD AUTONOMA METROPOLITANA, on 15 Nov 2026 at 21:22:31, subject to the Cambridge Core terms of use, available at https://www.cambridge.org/core/terms. https://doi.org/10.1017/9781108863858

10.5 Fixed effect structure of final model for NounRTLogSc (wrap-up region) 231
10.6 Fixed effect structure of final model for SentenceRTLogSc (whole sentence) 232
10.7 Fixed effect structure of final model for Experiment 2 232
12.1 Realisations of the intro-*it* across the basic clause patterns of the English language 255
12.2 The individual subcorpora of the *SAVE Corpus* 259
12.3 Overview of analysed sentences per corpus (number of intro-*it*s per thousand sentences/pts) 259
12.4 Overview of annotated variables 260
13.1 Overview of the analysed data from *ICLE* and *LOCNESS* 292
13.2 Annotation scheme used for the corpus analysis with explanations 292
14.1 Plus- and minus-terminology adapted from Rüdiger (2019: 48) 313
14.2 Dataset used in the analysis of minus-plurals and overtly marked plurals 314
14.3 Predictor variables in the statistical analysis 315
14.4 Language families and languages (including ISO 639-3 codes) in the analysed *ACE* and *VOICE* sections 316
