Infection Control & Hospital Epidemiology

Volume 46 2025 Number 6

CONTENTS

Joint Statement

559 Scientific Integrity Under Threat: The Role of the IDSA, PIDS, and SHEA Journals in an Evolving Political Landscape
Gonzalo Bearman, Roger Bedimo, David Calfee, Ravi Jhaveri, Paul Sax and Cynthia Sears

SHEA Expert Guidance

561 Multisociety guidance for sterilization and high-level disinfection
Erica S. Shenoy, David J. Weber, Kathleen McMullen, Zachary Rubin, Priya Sampathkumar, Joshua K. Schaffzin, Emily Sickbert-Bennett, Laraine Washer, Deborah S. Yokoe, Audrey H. Calderwood, Raymond Chinn, Michelle Day, Sylvia Garcia-Houchins, Waleed Javaid, Susan Klacik, Erin Kyle, Rekha K. Murthy, Amber Wood and William A. Rutala

Original Articles

584 "Risk factors for surgical site infections following cesarean delivery in urban safety-net hospitals"
Khaleda Akter, Megan Folks, Temilola-Azeezat Bakare, Mary Fornek, Briana Episcopia, Marie Abdallah, Ngozi Nwankpa and John Quale

589 Exploring social vulnerability in National Health Safety Network surgical site infections
Michael Dewitt, Caroline Reinke, Michael Inman, Werner Bischoff, Shelley Kester, Anupama Neelakanta, Mindy Sampson and Catherine Passaretti

597 Risk factors for the development of *Clostridioides difficile* infection in patients colonized with toxigenic *Clostridioides difficile*
Josh Clement, Gauri Barlingay, Sindhu Addepalli, Heejung Bang, Monica A. Donnelley, Stuart H. Cohen and Scott Crabtree

604 Prevalence and predictors of multidrug resistant organism infections in critically ill patients with opioid use disorder: a multicenter retrospective cohort study
Zeeshan M. Rizwan, Haris Akhtar, Julie L. Cunningham, Kristin C. Cole, John C. O'Horo, Ognjen Gajic and Ryan W. Stevens

611 Respiratory syncytial virus: an under-recognized healthcare-associated infection
Erin B. Gettler, H. Keipp Talbot, Yuwei Zhu, Danielle Ndi, Edward Mitchel, Tiffanie M. Markus, William Schaffner, Bryan Harris and Thomas R. Talbot

616 Development and validation of two novel antibiotic use metrics suitable for facilities and practitioners in post-acute and long-term care settings
Sunah Song, Brigid Wilson, Taissa A. Bej, Corinne Kowal, Federico Perez, David A. Nace, Taylor Boyer, Katie J. Suda, Charlesnika T. Evans, Aoife Fleming and Robin L.P. Jump

623 Discharge antibiotic prescribing at children's hospitals with established antimicrobial stewardship programs
Rebecca G. Same, Giyoung Lee, Jared Olson, Brendan Bettinger, Adam L. Hersh, Matthew P. Kronman, Jason G. Newland, Meg Grimshaw and Jeffrey S. Gerber

Cover image: ***The Dynamics of Bacterial Evolution, 2020***

https://doi.org/10.1017/ice.2025.10226 Published online by Cambridge University Press

629 Weekend effect on blood culture contamination: an observational study at a university hospital in Japan
Kazuhiko Nakaharai, Yoichi Shinozaki, Taku Tamura, Yasushi Nakazawa and Masaki Yoshida

Review

635 Sampling methods for flexible endoscopes without a working channel: a scoping review
Yana Halmans, David Wellenstein, Joost Hopman, Robert Takes and Guido van den Broek

Concise Communications

641 Reducing catheter-associated urinary tract infection rates in surgical critical care units via an informal catheter exchange protocol
Aricia Shen, Ryan Raypon, Meghan Madhusudhan, Michael Nurok, Tejal Brahmbhatt, Jonathan D. Grein, Galinos Barmparas and Michael A. Ben-Aderet

644 Infection prevention and control practices among pediatric family caregivers during respiratory viral season and an enteric outbreak
Aparna Darbha, Meghan Engbretson and Nisha Thampi

647 Ceiling-mounted far-UVC fixtures reduce the surface bioburden in occupied clinical areas
Emilie Hage Mogensen, Jacob Thyrsted Jensen, Søren Helbo Skaarup, Andreas Fløe Hvass, Cecilie Lynggaard Jeppesen, Maja Holst Rasmussen, Birgit Thorup Røge, Sara Moeslund Joensen, Stine Yde Nielsen, Elisabeth Bendstrup, Pernille Hauschildt, Anne Friesgaard Christensen and Christian Kanstrup Holm

650 Electronic clinical decision support system guided blood culture stewardship in emergency departments: response to the national blood culture media shortage
Kullaya Takkavatakarn, Gopi Patel, Wonsuk Oh, Melissa Gitman, Michael Nowak, Brendan Connell, Jonathan Nover, Lili Chan, Girish Nadkarni, Roopa Kohli-Seth, Nicholas Gavin, Bernard Camins and Ankit Sakhuja

Letters to the Editor

654 Social vulnerability influences racial and ethnic disparities in *Clostridioides difficile* infection outcomes
Jacinda C. Abdul-Mutakabbir and Karen K. Tan

656 A cluster of Burkholderia contaminans bloodstream infections in a rural hospital in Sierra Leone
Ioana Diana Olaru, Laura C. Kalkman, Emmanuel Marx Kanu, Islam Mohamed Kargbo, Christian Böing, Stefan Bletz, Martin P. Grobusch and Frieder Schaumburg

658 Nosocomial or community-acquired? A comparison of healthcare-associated infection definitions and maximum incubation periods of common respiratory viral infections at a large academic hospital
Dalton R. Butcher, Lauren DiBiase and Emily Sickbert-Bennett

659 Restoring the 2-set blood culture practice after the resolution of supply shortage
Shogo Hanai, Chiyo Shintani, Yuki Higashimoto, Yuki Uehara, Yohei Doi and Hitoshi Honda

661 Have positive blood culture bottles been left unnoticed?: *addressing this issue as important as the shortage of blood culture bottles*
Hideharu Hagiya, Shinnosuke Fukushima and Koji Iio

Infection Control & Hospital Epidemiology **(ISSN 0899-823X)** is published monthly by Cambridge University Press, One Liberty Plaza, New York, NY 10006, USA. Printed by Sheridan, a CJK Group Company.

Editorial Office
Communications should be addressed to the Editor, *Infection Control & Hospital Epidemiology*, One Liberty Plaza, New York, NY 10006 (email: iche.managingeditor@cambridge.org. Contributors should consult the Instructions for Contributors, which is available at the journal's Web site.

Advertising
Please direct advertising inquiries to M. J. Mrvica Associates, 2 West Taunton Avenue, Berlin, NJ 08009 (e-mail: mjmrvica@mrvica.com; telephone: 856-768-9360, fax: 856-753-0064). Publication of an advertisement in *Infection Control & Hospital Epidemiology* does not imply endorsement of its claims by the Society for Healthcare Epidemiology of America, by the Editor, or by Cambridge University Press.

Permissions
Articles may be copied or otherwise reused without permission only to the extent permitted by Sections 107 and 108 of the US Copyright Law. Permission to copy articles for personal, internal, classroom, or library use may be obtained from the Copyright Clearance Center (http://www.copyright.com, email: info@copyright.com). For all other uses, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale, please contact Cambridge University Press. Full details may be found at: www.cambridge.org/about-us/rights-permissions.

Subscriptions
The individual subscription prices for 2025 are: Print & Online: $381; Online Only: $286. Individuals have the option to order directly from Cambridge University Press. Institutional print + electronic and e-only subscriptions are available from Cambridge University Press and include unlimited online access; rates are tiered according to an institution's type and research output and may be reviewed at the journal's homepage on Cambridge Core: cambridge.org/ICHE.

Please direct subscription inquiries and requests for back issues to Customer Services at Cambridge University Press, e-mail: subscriptions_newyork@cambridge.org (USA, Canada, and Mexico) or journals@cambridge.org (outside of USA, Canada, and Mexico).

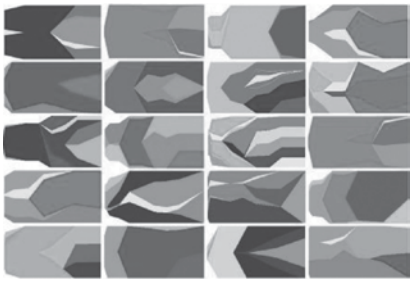

Postmaster: Send address changes to *Infection Control & Hospital Epidemiology*, Cambridge University Press, One Liberty Plaza, New York, NY 10006 USA.

About the cover:

Beginning with volume 43 (January 2022), the cover of *Infection Control & Hospital Epidemiology* (ICHE) will feature art inspired by or reflective of topics within the scope of the journal and their impact on patients, healthcare personnel and our society. These topics include healthcare-associated infections, antimicrobial resistance, and healthcare epidemiology. The intent is to feature original artwork that has been created by individuals who have a personal connection to one or more of these topics through their clinical work, research, or experience as a patient or an affected patient's family member, friend or advocate. The goal is to provide readers with a visual reminder of the human impact of the topics addressed in the journal and the importance of the work being done by those who read or contribute to ICHE and by all who are trying to make healthcare safer through the elimination of healthcare-associated infections.

For more information about the ICHE cover and how to submit artwork for consideration for a future cover, please visit the ICHE website: https://www.cambridge.org/core/journals/infection-control-and-hospital-epidemiology/front-covers

2025

Title: *The Dynamics of Bacterial Evolution*, 2020
Artist: Angharad Ellen Green, PhD
Medium: The artwork is made up of individual Muller plots representing *Streptococcus pneumoniae* bacteria lineages that were evolved separately within nasopharynx and lung environments. The command line program muller (v0.6.0 - https://pypi.org/project/muller/), with default parameters applied, was used to produce genotypes and trajectories tables for each of the evolved lineages. These tables were then used as inputs for ggplot2 (v3.3.2) and ggmuller (v0.5.4) in R-Studio (v4.0.2), to produce Muller plots. The individual plots were then assembled to produce the resulting artwork.

Dr. Green spoke to ICHE about her artwork.
What was the inspiration for this artwork? My postdoctoral research used an *in vivo* experimental evolution model to understand how *Streptococcus pneumoniae* (the pneumococcus) adapts to the lung and nasopharynx environments. The pneumococcus was experimentally evolved through a lung infection model and a nasopharynx infection model, producing independently evolved lung and nasopharynx lineages. We sequenced the evolved lineages and compared them to the ancestor to understand how their genomes had changed. This work also enabled us to determine how environmental differences between the upper and lower airways might shape pneumococcal adaptation and evolution. The resulting sequencing dataset was very large and complex with lots of interesting results. I wanted to use an effective method of visualising the data and Muller plots were chosen to display the evolutionary dynamics of mutations found in each evolved lineage over time. In these plots, each mutation is grouped as a genotype, which is represented by a different colour, and the blocks of colour expand when the genetic changes make the bacteria better able to survive in their local conditions. After completing the data analysis and publishing this work, I created this artwork as a memento of my postdoctoral research and I have a canvas of this work hanging in my apartment. Additionally, I wanted to demonstrate how scientific artwork can help visualise the complexities of evolution dynamics and help us to better understand bacterial processes.

What is your personnel connection to the content of ICHE? Throughout my career as a microbiologist, I have carried out research to investigate bacterial pathogenesis and antimicrobial resistance (AMR) of WHO-defined bacterial priority pathogens, such as *Pseudomonas aeruginosa*, methicillin-resistant *Staphylococcus aureus* (MRSA) and *Streptococcus pneumoniae*. I have actively promoted the importance of microbial genomic research to confront current global challenges, such as AMR and healthcare-acquired infections. I have championed microbiology research through my various roles in academia, volunteering on the Microbiology Society's Policy Committee and as a Research Manager at the Healthcare Infection Society. It is an honour for my bacterial evolution artwork to be on the cover of ICHE.

Given the scope of the journal, why is this work appropriate for the cover of *Infection Control & Hospital Epidemiology*? This artwork is made up of a collection of graphs called Muller plots, which are used to visualize how bacteria evolve when grown in diverse environments. The colours represent genetic changes that have taken place in the presence of environmental factors, such

---

as antimicrobials and the host immune system. The dynamics of evolution are complex and being able to visualise this process enables scientists to better understand bacterial processes, including the development of AMR. This artwork is appropriate for the cover of ICHE as it was created as a direct result of scientific research into how bacteria can adapt and evolve in diverse host niches to cause disease. Additionally, this artwork makes it possible for scientists to visualise the complexities of the dynamics of evolution and comprehend how bacteria adapt to different host environments.

Dr. Green is a Senior Research Data Steward in the Advanced Research Computing Centre (ARC) at UCL in London. *Her postdoctoral research at the University of Liverpool was supported by a Sir Henry Dale Fellowship, awarded by the Wellcome Trust and the Royal Society (grant number 204457/Z/16/Z) to Dr. Daniel R Neill. The research from which this artwork was derived was published in Molecular Biology and Evolution (Green AE, Howarth D, Chaguza C, et al. Pneumococcal colonization and virulence factors identified via experimental evolution in infection models. Mol Biol Evol 2023; 38: 2209-2226).*
