SENSES, COGNITION, AND RITUAL EXPERIENCE IN THE ROMAN WORLD

How do the senses shape the way we perceive, understand, and remember ritual experiences? This book applies cognitive and sensory approaches to Roman rituals, reconnecting readers with religious experiences as members of an embodied audience. These approaches allow us to move beyond the literate elites to examine broader audiences of diverse individuals, who experienced rituals as participants and/or performers. Case studies of ritual experiences from a variety of places, spaces, and contexts across the Roman world, including polytheistic and Christian rituals, state rituals, private rituals, performances, and processions, demonstrate the dynamic and broad-scale application that cognitive approaches offer for ancient religion, paving the way for future interdisciplinary engagement. This title is part of the Flip it Open Programme and may also be available Open Access. Check our website Cambridge Core for details.

BLANKA MISIC is Instructor in Ancient Civilizations at Champlain College Lennoxville. She researches and publishes on cognitive and sensory aspects of religious rituals and was recently awarded the HORIZON EU Marie Skłodowska-Curie Postdoctoral Fellowship at Institut für Klassische Archäologie, Universität Wien.

ABIGAIL GRAHAM is Research Fellow at the Institute of Classical Studies at the University of London and an honorary research fellow at the British School Rome, where she is the founder and coordinator of their Postgraduate Course in Roman Epigraphy. She researches and publishes on cognition, epigraphy, and monumentality in the urban landscape.

ANCIENT RELIGION AND COGNITION

Series Editors

Esther Eidinow, *University of Bristol*
Thomas Harrison, *University of St Andrews*

This series seeks to take advantage of a critical moment in the development of the study of ancient religion. This is one in which previous models (especially the sharp oppositions frequently drawn between ritual and belief, or between the social and the individual) are increasingly being questioned, and in which scholars of the ancient world are more and more drawing on cognitive approaches in the search for new paradigms. The 'cognitive science of religion' draws on insights developed in a wide range of fields: cognitive and evolutionary psychology, social anthropology, and neurobiology, amongst others. In essence, however, it seeks to understand religious experience as rooted in the ordinary cognitive capacities of the human brain. The series covers not only Greek and Roman religion but a range of ancient cultures from the Mediterranean and Near East, including Greece, Rome, Egypt, Babylonia, Persia, and Phoenicia, as well as cultures from Iron Age Europe. It will also explore the implications for the study of these cultures of a range of different cognitive approaches to religion and will include work by scholars from a wide range of disciplines in anthropology, the study of religion, evolutionary psychology, and neuroscience in addition to that by historians and archaeologists of the ancient world.

Titles in the series:

Cognitive Approaches to Ancient Religious Experience
Esther Eidinow, Armin W. Geertz, and John North
