Introduction 1
Grand View of the Standard Model 1
Grand View of New Physics 3
The Grand View of the Expedition and the Strategy 8
Introducing Main Players 17
How to Use This Book Optimally 20

Part I Basics of Gauge Theories 23

1 Fundamentals 25
1.1 Preliminaries 25
1.2 Lagrangians for Scalar Fields 26
1.3 First Encounter with Symmetries 27
1.4 Checking the Symmetries of Scalar Lagrangians 28
1.5 Promotion of a Global U(1) Symmetry to a Local U(1) Symmetry 29
1.6 A Closer Look at the U(1) Gauge Theory 30
1.7 Nonabelian Global Symmetries 32
1.8 Promotion of a Global Nonabelian Symmetry to a Local One 37
1.9 Lagrangians for Fermions 40
1.10 Spontaneous Symmetry Breakdown (SSB) 45
1.11 Higgs Mechanism 53

Part II The Standard Model 57

2 The Standard Model of Electroweak and Strong Interactions 59
2.1 Particle Content and Gauge Group of the SM 59
2.2 Short Overview: Lagrangian of the SM 60
2.3 Spontaneous Symmetry Breakdown in the SM 62
2.4 Gauge Boson Self-Interactions 65
2.5 Flavor Structure of the SM 66
2.6 Lepton Flavor Violation 79

Downloaded from https://www.cambridge.org/core. UNIVERSIDAD AUTONOMA METROPOLITANA, on 16 Nov 2026 at 23:53:11, subject to the Cambridge Core terms of use, available at https://www.cambridge.org/core/terms. https://doi.org/10.1017/9781139524100

2.7 Quantumchromodynamics (QCD) 80
2.8 Final Remarks 84

Part III Weak Decays in the Standard Model 85

3 Weak Decays at Tree Level 87
3.1 Muon Decay 87
3.2 Leptonic Decays of Charged Mesons 90
3.3 Semileptonic Decays of Charged Mesons 94
3.4 The Determination of $|V_{cb}|$ and $|V_{ub}|$ 96
3.5 Leptonic and Semileptonic Decays of Neutral Mesons 98
3.6 Nonleptonic Decays of Mesons 98
3.7 Summary and Motivation 101

4 Technology beyond Trees 103
4.1 Loop Calculations 103
4.2 Renormalization 116
4.3 Renormalization Group Equations 123

5 Short-Distance Structure of Weak Decays 130
5.1 Operator Product Expansion in Weak Decays 130
5.2 Current-Current Operators beyond Leading Order 149

6 Effective Hamiltonians for FCNC Processes 179
6.1 Overture: General View of FCNC Processes 179
6.2 Calculations of Basic One-Loop Functions 189
6.3 $\Delta F = 2$ Transitions 206
6.4 The World of Penguins 212
6.5 $B \to X_s\gamma$ Decay 229
6.6 $b \to s\ell^+\ell^-$ and $d \to s\ell^+\ell^-$ Transitions 244
6.7 $d \to s\nu\bar{\nu}$ and $b \to s\nu\bar{\nu}$ Transitions 249

7 Nonperturbative Methods in Weak Decays 253
7.1 General View 253
7.2 Dual QCD Approach 254
7.3 Lattice QCD Results 274
7.4 QCD Factorization for Exclusive B Decays 277
7.5 Heavy Quark Effective Theory (HQET) and Heavy Quark Expansions (HQE) 281
7.6 Other Nonperturbative Methods 282

8 Particle-Antiparticle Mixing and CP Violation in the Standard Model 283
8.1 Particle-Antiparticle Mixing 283

Downloaded from https://www.cambridge.org/core. UNIVERSIDAD AUTONOMA METROPOLITANA, on 16 Nov 2026 at 23:53:11, subject to the Cambridge Core terms of use, available at https://www.cambridge.org/core/terms. https://doi.org/10.1017/9781139524100

8.2 B_q Decays into CP Eigenstates 299
8.3 Classification of CP Violation 304
8.4 Standard Analysis of the Unitarity Triangle (UT) 309
8.5 The Angles α, β, and γ from $B_{d,s}$ Decays 317
8.6 $B \to \pi K$ Decays 325

9 Rare *B* and *K* Decays in the Standard Model 329
9.1 $\bar{B} \to \bar{K}^* \ell^+ \ell^-$ and $\bar{B} \to \bar{K} \ell^+ \ell^-$ 329
9.2 $B_{s,d} \to \mu^+ \mu^-$ and $B_{s,d} \to \tau^+ \tau^-$, $e^+ e^-$ 347
9.3 $B^+ \to \tau^+ \nu_\tau$ 355
9.4 $\bar{B} \to D \ell \bar{\nu}_l$, $\bar{B} \to D^* \ell \bar{\nu}_l$, $B_c \to J/\psi \ell \bar{\nu}_l$, and $\Lambda_b \to \Lambda_c \ell \bar{\nu}_l$ 357
9.5 $K^+ \to \pi^+ \nu \bar{\nu}$ and $K_{\rm L} \to \pi^0 \nu \bar{\nu}$ 367
9.6 $B \to K^* \nu \bar{\nu}$, $B \to K \nu \bar{\nu}$, and $B \to X_s \nu \bar{\nu}$ 375
9.7 $K_{L,S} \to \mu^+ \mu^-$ and $K_L \to \pi^0 \ell^+ \ell^-$ 384

10 ε'/ε in the Standard Model 388
10.1 Preliminaries 388
10.2 Basic Formulas 390
10.3 Hadronic Matrix Elements 392
10.4 A Convenient Formula for ε'/ε in the SM 395
10.5 Numerical Analysis of ε'/ε 399

11 Charm Flavor Physics 402
11.1 Preliminaries 402
11.2 $D^0 - \bar{D}^0$ Mixing 402
11.3 CP Asymmetries in D Decays 404
11.4 Connection between D and K Physics 408

12 Status of Flavor Physics within the Standard Model 410
12.1 Successes 410
12.2 Summary of the Anomalies 410
12.3 Implications for the Wilson Coefficients 412

Part IV Weak Decays beyond the Standard Model 415

13 First Steps beyond the Standard Model 417
13.1 Preliminaries 417
13.2 $\Delta F = 2$ Transitions 418
13.3 $\Delta F = 1$ Nonleptonic Operators 427

14 Standard Model Effective Field Theory 433
14.1 Basic Framework 433
14.2 Full Set of Dimension-6 Operators 437

Downloaded from https://www.cambridge.org/core. UNIVERSIDAD AUTONOMA METROPOLITANA, on 16 Nov 2026 at 23:53:11, subject to the Cambridge Core terms of use, available at https://www.cambridge.org/core/terms. https://doi.org/10.1017/9781139524100

14.3 Rotations in the Flavor Space 439
14.4 Renormalization Group Equations 443
14.5 $SU(2)_L$ Correlations between $b \to s\nu\bar{\nu}$ and $b \to s\ell^+\ell^-$ 450
14.6 General Procedure and Useful Results 453
14.7 ε'/ε beyond the SM 459

15 Simplest Extensions of the SM 466
15.1 Minimal Flavor Violation 466
15.2 $2HDM_{\overline{MFV}}$ 478
15.3 Beyond MFV: Models with $U(2)^3$ Symmetry 480
15.4 Beyond MFV: Z' Boson 483
15.5 Beyond MFV: Z Boson with FCNC 505
15.6 Beyond MFV: Right-Handed W' 513
15.7 Beyond MFV: Neutral Scalars and Pseudoscalars 515
15.8 Beyond MFV: Charged Scalar Exchanges 528
15.9 Beyond MFV: Colored Gauge Bosons and Scalars 529

16 Specific Models 533
16.1 Preliminaries 533
16.2 331 Models 534
16.3 Vector-Like Quarks and Leptons 543
16.4 Leptoquark Models 556

17 Beyond Quark Flavor Physics 580
17.1 General View 580
17.2 Lepton Flavor Violation 583
17.3 Electric Dipole Moments (EDMs) 599
17.4 Anomalous Magnetic Moments $(g-2)_{\mu,e}$ 615
17.5 Neutrino Oscillations 621

18 Grand Summary of New Physics Models 622
18.1 Preliminaries 622
18.2 General Observations on B Physics Anomalies 624
18.3 Tree-Level Mediators 626
18.4 Kaon Physics 626
18.5 Generalities 627

19 Flavor Expedition to the Zeptouniverse 628
19.1 Preliminaries 628
19.2 Basic Requirements for a Successful Zeptouniverse Expedition 629
19.3 Classifying Correlations between Various Observables 630
19.4 DNA Charts 634
19.5 Can We Reach the Zeptouniverse with Rare K and $B_{s,d}$ Decays? 639

Downloaded from https://www.cambridge.org/core. UNIVERSIDAD AUTONOMA METROPOLITANA, on 16 Nov 2026 at 23:53:11, subject to the Cambridge Core terms of use, available at https://www.cambridge.org/core/terms. https://doi.org/10.1017/9781139524100

20 Summary and Shopping List 641

Appendix A Dirac Algebra, Spinors, Pauli and Gell-Mann Matrices 647
A.1 Dirac Algebra and Spinors 647
A.2 Pauli and Gell-Mann Matrices 648
A.3 Fierz Identities 649

Appendix B Feynman Rules of the Standard Model 651
B.1 Preliminaries 651
B.2 Gauge Boson Propagators 651
B.3 Fermion and Scalar Propagators 652
B.4 Fermion–Gauge Boson Couplings 652
B.5 Fermion–Goldstone (Higgs) Boson Couplings 652
B.6 Gauge Boson Self-Interactions 653
B.7 Gauge Boson–Goldstone (Higgs) Interactions 653

Appendix C Massive Loop Integrals 654
C.1 Integrals with Two Propagators 654
C.2 Integrals with Three Propagators 655
C.3 Integrals with Four Propagators 656
C.4 More Complicated Integrals 657

Appendix D Numerical Input 661

Appendix E Analytic Solutions to SMEFT RG Equations 663
