Corrigendum

Eagles, J. M., Wileman, S. M., Cameron, I. M., *BJP*, 175, 472–475. The 'Clinical implications' (p. 475) should read:

- Seasonal affective disorder (SAD), even when relatively narrowly defined, is common among people attending general practitioners' surgeries in January.
- Rates of SAD, based on the Seasonal Pattern Assessment Questionnaire (SPAQ), are similar in the community.
- The SPAQ gave rise to inflated prevalence estimates of SAD.
