Contents

	Preface	*page ix*
1	**Introduction**	**1**
1.1	Particle physics	1
1.2	Particles and interactions	2
1.3	Relativistic kinematics	5
1.4	Summary of particle properties	7
1.5	Scattering	10
1.6	Particle physics experiments	14
1.7	Data analysis	18
2	**Electromagnetic interactions**	**29**
2.1	Energy loss in matter	30
2.2	Quantum treatment of the energy loss	34
2.3	Fluctuations in energy loss	42
2.4	Energy loss of electrons and positrons	46
2.5	Interactions of photons	54
2.6	Elastic scattering	64
2.7	Multiple scattering	67
2.8	Other electromagnetic effects	71
3	**Nuclear interactions**	**79**
3.1	Strong interactions	79
3.2	Weak interactions	88
4	**Particle beams**	**93**
4.1	Particle accelerators	93
4.2	Secondary beams	103
4.3	Beam transport	108

4.4	Flux monitors	115
4.5	Other particle sources	117
4.6	Radiation protection	120
5	**Targets**	**125**
5.1	Standard targets	125
5.2	Special purpose targets	129
6	**Fast electronics**	**133**
6.1	Fast pulse instrumentation	133
6.2	Discriminators	134
6.3	Coincidence units	137
6.4	CAMAC standard	141
6.5	Other fast pulse devices	142
6.6	Signal cables	144
7	**Scintillation counters**	**148**
7.1	The scintillation process	148
7.2	Light collection	156
7.3	Photomultiplier tubes	161
7.4	Performance	165
7.5	Timing applications	169
8	**Cerenkov counters**	**178**
8.1	The Cerenkov effect	178
8.2	Photon yield	183
8.3	Gas radiators	186
8.4	Threshold counters	190
8.5	Differential counters	196
8.6	Total absorption counters	201
9	**Proportional chambers**	**205**
9.1	Elements of a proportional chamber	205
9.2	Fundamental processes in gases	208
9.3	Proportional chamber gases	216
9.4	Multiwire proportional chambers	218
9.5	Readout electronics	225
10	**Drift chambers**	**234**
10.1	Properties of drift chamber gases	234
10.2	Construction	241
10.3	Readout electronics	247
10.4	Performance	249
10.5	Particle identification	252

11 Sampling calorimeters **259**
11.1 Electromagnetic showers 259
11.2 Electromagnetic shower detectors 266
11.3 Hadronic shower detectors 274
11.4 Neutral particle detectors 280

12 Specialized detectors **285**
12.1 Bubble chambers 285
12.2 Emulsions 288
12.3 Spark chambers 289
12.4 Streamer chambers 293
12.5 Transition radiation detectors 294
12.6 Short summary of some other detectors 296

13 Triggers **303**
13.1 General considerations 303
13.2 Identified particle triggers 307
13.3 Deposited energy triggers 315
13.4 Higher level triggering 316

14 Detector systems **325**
14.1 Magnetic spectrometers 325
14.2 Design considerations 329
14.3 Fixed target spectrometers 336
14.4 Colliding beam spectrometers 341
14.5 Nucleon decay spectrometers 349
14.6 Data acquisition 351

15 Some fundamental measurements **358**
15.1 Particle properties 358
15.2 Total cross section 367
15.3 Elastic scattering 370
15.4 Polarization experiments 372
15.5 New particle searches 376

Appendix A: Physical constants 385
Appendix B: Periodic table of the elements 386
Appendix C: Probability and statistics 388
Appendix D: Cross sections and probability 391
Appendix E: Two-body scattering in the LAB frame 393
Appendix F: Motion of ions in a combined electric and magnetic field 394
Appendix G: Properties of structural materials 396
