The most authoritative illustrated book on flying reptiles available

Features 192 illustrations and 17 maps

Pterosaurs

Natural History, Evolution, Anatomy

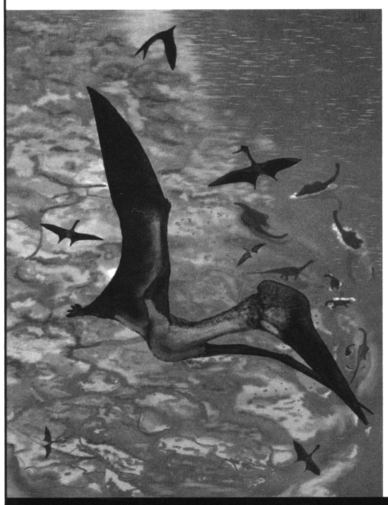

Mark P. Witton

For 150 million years, the skies didn't belong to birds—they belonged to the pterosaurs. These flying reptiles, which include the pterodactyls, shared the world with the nonavian dinosaurs until their extinction 65 million years ago. Some pterosaurs, such as the giant azhdarchids, were the largest flying animals of all time, with wingspans exceeding thirty feet and standing heights comparable to modern giraffes. This richly illustrated book takes an unprecedented look at these astonishing creatures, presenting the latest findings on their anatomy, ecology, and extinction.

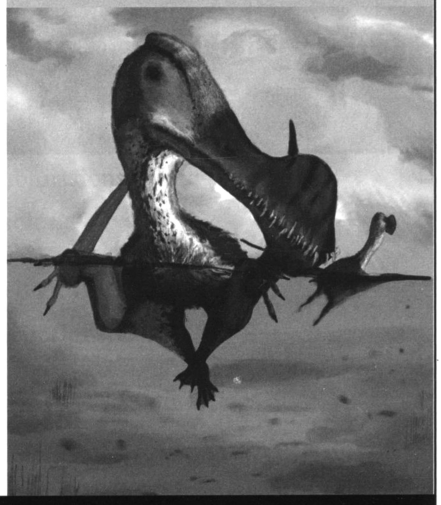

- **The most comprehensive book on pterosaurs ever published**
- **Covers every known species and major group of pterosaurs**
- **Describes pterosaur anatomy, ecology, behaviors, diversity, and more**
- **Encourages further study with 500 references to primary pterosaur literature**

Cloth $35.00 978-0-691-15061-1

"This book is both academically interesting and truly fun to read. That is a difficult balance to reach, but Witton does an excellent job of it by using a lighthearted, informal writing style in combination with a well-referenced, serious scientific review. An invaluable reference."
—Michael Habib, University of Southern California

The *Journal of Paleontology* publishes manuscripts on all aspects of paleontology, including systematics, phylogeny, paleoecology, paleobiogeography, biostratigraphy, taphonomy, and evolution. It emphasizes specimen-based research and features illustrations of the highest quality possible. Manuscripts treating all fossil organism groups are welcome, including invertebrates, vertebrates, plants, algae, and microorganisms of all sorts, as well as ichnofossils (trace fossils).

The *Journal of Paleontology* accepts only online manuscript submissions through the website:

http://journalofpaleontology.allentrack.net/

Author guidelines can be downloaded at:

http://www.journalofpaleontology.org/instructions.htm

For questions regarding online submissions, please contact the editorial offices at:

jpaleo@si.edu

The Paleontological Society thanks the University of Saskatchewan for its generous contributions to this journal.

JOURNAL OF PALEONTOLOGY

VOLUME 87 ■ NUMBER 5 ■ SEPTEMBER 2013 ■ ISSN 0022-3360

755 Catalina Pimiento, Gerardo González-Barba, Dana J. Ehret, Austin J. W. Hendy, Bruce J. MacFadden, and Carlos Jaramillo
Sharks and rays (Chondrichthyes, Elasmobranchii) from the late Miocene Gatun Formation of Panama

775 Sean P. Robson and Graham A. Young
Late Ordovician conulariids from Manitoba, Canada

786 Manuel Paez-Reyes and Martin J. Head
The Cenozoic gonyaulacacean dinoflagellate genera *Operculodinium* Wall, 1967 and *Protoceratium* Bergh, 1881 and their phylogenetic relationships

804 Stephen R. Westrop and Jonathan M. Adrain
Biogeographic shifts in a transgressive succession: the Cambrian (Furongian, Jiangshanian; latest Steptoean–earliest Sunwaptan) agnostoid arthropods *Kormagnostella* Romanenko and *Biciragnostus* Ergaliev in North America

818 Roy E. Plotnick, Benjamin F. Dattilo, Daniel Piquard, Jennifer Bauer, and Joshua Corrie
The orientation of strophomenid brachiopods on soft substrates

826 Richard L. Squires
West coast North America record of the Paleogene marine stromboid gastropod *Rimella* and paleobiogeography of the genus

842 Kenneth D. Rose, Kishor Kumar, Rajendra S. Rana, Ashok Sahni, and Thierry Smith
New hypsodont tillodont (Mammalia, Tillodontia) from the early Eocene of India

854 Richard Hofmann, Michael Hautmann, and Hugo Bucher
A new paleoecological look at the Dinwoody Formation (Lower Triassic, western USA): intrinsic versus extrinsic controls on ecosystem recovery after the end-Permian mass extinction

881 Christina Ifrim, Wolfgang Stinnesbeck, and José Flores Ventura
An endemic cephalopod assemblage from the lower Campanian (Late Cretaceous) Parras Shale, western Coahuila, Mexico

902 Shujuan Yang, Xulong Lai, Guilian Sheng, and Shuoshuo Wang
Deep genetic divergence within a "living fossil" brachiopod *Lingula anatina*

909 Merlynd K. Nestell and Calvin H. Stevens
Mixed Tethyan and McCloud Belt rugose corals and fusulinids in an Upper Triassic conglomerate, central Oregon

922 Gerald Mayr, James L. Goedert, and Samuel A. McLeod
Partial skeleton of a bony-toothed bird from the late Oligocene/early Miocene of Oregon (USA) and the systematics of Neogene Pelagornithidae

930 Donald R. Prothero, Brian L. Beatty, and Richard M. Stucky
Simojovelhyus is a peccary, not a helohyid (Mammalia, Artiodactyla)

934 Ewa Roniewicz and George D. Stanley, Jr.
Upper Triassic corals from Nevada, western North America, and the implications for paleoecology and paleogeography
