**Paget.**—*Masters of Medicine: John Hunter, Man of Science and Surgeon.* By STEPHEN PAGET. (London: T. Fisher Unwin, Paternoster Row. 1897.) Pages 272. One Illustration. Price 3s. 6d.

THE introduction to this, the first volume of the series, is by Sir James Paget, Bart., and the earlier chapters are confined to a short family history of Hunter, and a carefully traced account of his connection, work with, and the death of his brother William. Also his early life is well brought forward, and of considerable interest—notably those points which, like his love for nature, became so strongly marked later. His connection with Jenner is most interestingly told by means of the letters which passed between them. The failings of this great man are revealed, but with a kindly, reverent, and non-carping spirit, as is fit and proper. The whole book is one of great general interest, and if there are to be found in this edition parts which more especially appeal to us, professors of the craft of which Hunter was an apostle, they are in his London life and his wondrous museum. The influence of mind over matter is well exemplified in the man whose indomitable will and restless energy conquered his bodily failings when a veritable martyr to angina pectoris. The judicious handling the subject has received causes one to lay down the book with regret, and a sincere desire to reperuse it.
