Acknowledgements

The proposals for the chapter dealing with mental, behavioural and developmental disorders in the tenth revision of the International Classification of Diseases (ICD) are in the true sense a product of many minds. In their development WHO has called on and received the generous advice and support of its network of collaborating centres, of the members of Expert Advisory Panels on Mental Health, Neurosciences and Drug Dependence and Alcohol Problems from some 60 countries, and of the non-governmental organizations with whom WHO is in official relations. Among the latter, the collaboration with the World Psychiatric Association has been particularly useful; this Association sent the text of the ICD to all of its member societies, assembled their views and comments and worked closely with WHO in incorporating these comments into the text of the ICD. The WPA has created a special committee under the chairmanship of Professor E. Stromgren which summarised all the views received, and maintained collaboration with WHO throughout the development of the proposals.

The development of the text of the ICD-10 *Clinical Descriptions and Diagnostic Guidelines* was made possible by the numerous contributions made by many consultants, chosen from leading scientists and psychiatrists from more than 40 countries covering all the disciplines relevant to mental health programmes as well as all the major schools of thought in this complex area. The names of those who have participated most actively in the process of formulation of proposals are given in the 1988 draft of Chapter V "Mental, Behavioural and Developmental Disorders: Clinical Descriptions and Diagnostic Guidelines" (WHO, Division of Mental Health, Geneva, 1988 (MNH/MEP/87.1, Rev. 2)). Many other individuals have also communicated their views to WHO and thus helped in improving the classification. A series of Field Trials involving 194 Centres in 55 countries have produced further contributions. Their names will be listed in the reports from the trials but it is a pleasure to acknowledge here their hard work and assistance.

WHO has also been assisted by a small editorial group which has helped to incorporate comments into the text of the classification, and by heads of Centres which have helped in the co-ordination of the Field Trials of ICD-10. In particular a debt of gratitude is due to Dr J. van Drimmelen, who has worked with WHO staff throughout the process of development of the ICD-10 proposals, and to Mrs J. Wilson, who has had the administrative responsibility for work carried out in connection with this project, and whose conscientiousness and organisational ability was essential to the smooth conduct of this work. Professor J. E. Cooper has been closely involved as chief consultant throughout the work of this project. Dr J. Burke worked with WHO in Geneva for a number of months and subsequently continues his close involvement as a consultant in the development of the classification and the trials. Dr A. Jablensky, former Senior Medical Officer of the Division of Mental Health, made a major contribution to this work: he was responsible for the organisation and co-ordination of the preparation of the early drafts of Chapter V until his departure from WHO. In this work he was ably assisted by Miss J. Sikkens.

This work has also greatly benefited from products of a joint project which WHO and the Alcohol, Drug Abuse and Mental Health Administration (ADAMHA) have undertaken to improve psychiatric classification and diagnosis and to develop instruments for the assessment of mental disorder in population surveys and in clinical work. That project was supported by USPHS Grant No. 5 UOI MH35883.
