# Index

Entries in *italics* are to figures.

51 Pegasus, 12

aberration, *152*, 148–153, 157, 258, 259
absorptance, 164
accelerometers, 250–252
adaptive optics, 193–195, 301
adiabatic processes, 67, 70, 82
adiabatic relation, 69–71
aerographite, 199
Airy disk, 188, 277
Algol, 12
aliens. *See* life, alien
Alpha Centauri, 22, 25–27
amplitude modulation (AM), 281
amplitude shift keying (ASK), 282
antigravity, 322
antimatter
  engines, 140–143
  reactions, 139–140
antiprotons, 140
aperture synthesis, 9, 190–192, 301–302
apoapsis, 50
Apollo, 11, 80, 254, 313
Ariane 6, 80, *81*
artificial intelligence (AI), 19, 318, 325
atomic clocks, 253
atomic mass unit $m_u$, 4

Barnard's Star, 3, 22, 23, 134
barycentre, 48
barycentric coordinate time (TCB), 250, 281
batteries, 313
beacons (navigation), 257
BepiColombo, 65, 268, 311
bielliptic transfer orbit, *57*, 57
binomial distribution, 289
biosignatures, 20–21
Biot–Savart law, 238
black bodies, 169, 286–287, 298
black body radiation. *See* Planck function
black holes, 264, 321
blueshift, 154
bow shocks, 213
Brayton cycle, *76*, 76
Breakthrough Starshot, 204, 303
bremsstrahlung, 133, 221
brown dwarfs, 22, 23
Bussard ramjet. *See* ramjet, Bussard

capacitors, 313
carrier waves, 281
Cassini (spacecraft), 64, 310, 314
catalyzed deuterium reaction, 132, 147
channel (communication), *288*, 288
channel capacity, 282, 291, 294–296
characteristic energy, 54
chemiluminescence. *See* photochemical luminescence
choked flow, 74, 75, 82
CNO cycle, 234
coding, 288
conductivity (electromagnetism), 167
convergent–divergent nozzles, *72*, 70–75, 127
coordinate acceleration, 101, 251
coordinate velocity, 100
coronagraphs, 287
cosmic microwave background, 158, 300
cosmic rays, 217
Coulomb barrier, 128
critical mass. *See* nuclear fission, critical mass

Daedalus, 3, *135*, 134–136
Dawn (spacecraft), 86, 88–91
de Laval nozzles. *See* convergent–divergent nozzles
dead reckoning, 250
debris disks, 12, 22
Debye length, 244
decibels, 279
decoding. *See* coding
Deep Space 1, 86, 88

Deep Space Optical Communications (DSOC), 276, 297, 305
delta-DOR, 255, 256
deuterium, 129
differential one-way ranging (DOR), 255, 275
diffraction, 8, 188–190, 277, 285
diffraction angle, 189, 209, 300
direct fusion drive, 137, 138
Doppler effect, 153–157, 297
  energy conservation, 178, 187
drag, 226–228, 230
Dragonfly (laser sail). *See* Project Dragonfly
Drake equation, 19
dynamic pressure. *See* ram pressure

eccentricity, 50
effective exhaust velocity, 31, 37, 102
  ion engines, 83
  mixed matter–photon rockets, 109
  photon rockets, 109
  with thrust augmentation, 144
effective temperature, 286
Einstein–Rosen bridge, 321
encoding. *See* coding
energetic neutral atoms (ENAs), 310
energy efficiency
  classical rockets, 38–39
  ion engines, 92
  laser sails, 180, 181
  mixed matter–photon rockets, 111–113
  photon rockets, 107
  rockets, 114
enthaply, 68
Epsilon Eridani, 12
equivalence principle, 105, 251
error-correcting code, 289–291
escape velocity, 52, 54
  solar sails, 162
ethics, 325
Europa Clipper, 308–311
event horizon, 321
Event Horizon Telescope, 191
exhaust, 77
Extremely Large Telescope (ELT), 25, 26, 303

faster-than-light travel, 320
fibre optic gyroscopes. *See* gyroscopes, fibre optic
field emission electric propulsion, 91
fission bombs, 116, 119, 125
fission fragment rockets, 122–125
fission pulse rockets, 125–127
force (relativistic), 100–101
frame (communication), 283
Fraunhofer diffraction, 188
frequency modulation (FM), 281
frequency shift keying (FSK), 282
Fried parameter, 193
Friis transmission equation, 278, 301, 316–317
  relativistic, 280, 305
fuel, 77
  liquid, 77–79
  solid, 79–80
fuel cells, 313
fusion drive rockets, 139
fusion pulse rockets, 134

Gaia, 22, 27, 258, 263, 302
Galileo (navigation), 254, 272. *See also* global navigation satellite systems (GNSS)
gas turbines, 76
Gauss's law, 244
general relativity, 28, 105, 251, 320, 321
global navigation satellite systems (GNSS), 10, 271–275
Global Positioning System (GPS). *See* global navigation satellite systems
graphene, 198
gravitational focusing, 64
gravitational parameter $\mu$, 48
gravity assists, *61*, *62*, 59–65, 322
  Cassini, *65*
  Voyager, *60*, 64
gridded ion engines, 86
gyroscopes, 252–253
  fibre optic, 252

habitable zones, 14, *15*
Hall effect thruster, 91
heat engines, 75–76, 90, 118, 123, 315
helicity drive, 138
heliopause, 27, 212
heliosheath, 213
heliosphere, 212
helium-3 occurrence, 132, 322
Hipparcos, 258
Hohmann transfer orbit, *56*, 55–57
Holevo bound, 294–296, 305
Hooke's law, 251
hyperbolic excess velocity, 54

hyperbolic navigation, 255, 275
hyperspace, 322

Icarus, 136–137, 302
ideal gas, 69
IKAROS, 172–173
impact parameter, 53
incentive trap, 325, 326
inertial confinement fusion, 131
inertial measurement unit, 253
instantaneous rest frame, 38, 97
instantaneous rockets, 32, *43*, 42–43
intensity, 5, 159, 277
  relativistic transformation, 157
interferometers, 9, 190
International Celestial Reference Frame (ICRF), 250
International Thermonuclear Experimental Reactor (ITER), 130
interstellar medium (ISM), 268, 271
interstellar objects (ISOs), 173, 216
irradiance. *See* intensity
isentropic flow, 67–70, 75

James Webb Space Telescope (JWST), 280
Julian year, 4
Jupiter Icy Moons Explorer (JUICE), 307–311

Ka-band, 254, 276
Kepler's third law, 50
Keplerian orbit, 48–49, 176
  angular momentum, 50, 53
  circular, 51–52
  elliptical, 49, *50*, *51*, 50–51
  hyperbolic, *54*, 53–54
  parabolic, 54
  radial orbit, 54
  relative, 48
Kerr tunnels, 321
kiloton TNT, 125
Kuiper belt, 12, 27, 210

Larmor radius, 127
lasers, 131, 196–197, 297, 302, 303, 310
Lawson criterion, 130
length contraction, 96
life
  alien, 52, 325
  properties, 18–19
  role of water, 16
lightness number (sail), 161
LightSail (solar sail), *171*, 171
loading parameters (sail), 161
local bubble, 214, 216
local interstellar cloud, 214, 216
logarithmic spiral orbit, 163–164
Lorentz force, 127, 237
Lorentz transformations, 95
luminosity, 5

Mach number, 73
magnetic confinement fusion, 130
magnetic nozzles, 127, 141
magnetic pressure, 237
magnetic sail braking, 206, 240–242, 247
magnetized target fusion, 138
magnetometers, 310
magnetopause, 237
magnetoplasma sail (MPS), 243
magnetoplasmadynamic (MPD) thruster, 91
magnetosphere, 237
main sequence (stars), 12, 25, 129, 161, 288
Mars Express, 307, 308
Mars Reconnaissance Orbiter, 311
Mars Science Laboratory (Curiosity), 256
mass spectrometers, 308
mean free path, 218
mini-magnetic plasma propulsion (M2P2), 242
modes (communication), 294
modulation, 281–283, 288
motivations, 8–11, 324
$\mu$. *See* gravitational parameter $\mu$
muons, 140

nanophotonics, 201. *See also* photonic crystals
National Ignition Facility (NIF), 131
natural guide stars, 193, 194
NERVA programme, 121
neutron activation, 131, 225
neutron multiplication factor, 116
neutron reflectors, 121
neutron stars, 264
New Horizons, 54, 256, 276, 302, 307–309, 314
Newton's second law, 33
  relativistic, 100–101
noisy channel coding theorem, 291
non-Keplerian orbits, 163
nova, 12
nozzles. *See* convergent–divergent nozzles
NSTAR, 83, 86, 89

Downloaded from https://www.cambridge.org/core. UNIVERSIDAD AUTONOMA METROPOLITANA, on 11 Nov 2026 at 10:32:06, subject to the Cambridge Core terms of use, available at https://www.cambridge.org/core/terms. https://doi.org/10.1017/9781009700429.020

nuclear binding energy, 115–116, 128
nuclear bombs. *See* fission bombs
nuclear electric propulsion, 92
nuclear fission, 115–120
  antimatter induced, 145
  critical mass, 119
  delayed neutron emission, 117
