VISITING THE ORACLE AT DODONA

Previous studies of Greek oracles have largely examined their social and political connections. In contrast, this pioneering volume explores the experience of visiting the oracle of Zeus at Dodona in NW Greece, focusing on the role of the senses and embodied cognition. Building on the unique corpus of oracular question tablets found at the site, it investigates how this experience made new ways of knowing and new forms of knowledge available. Combining traditional treatments of evidence with more recent theoretical approaches, including from psychology, narratology and environmental humanities, the chapters explore the role of nature, sound, touch and stories in the experience of consultation. By evoking the details of this experience, they help the reader understand more deeply what it was like for ancient men and women to visit the oracle and ask the god for help. This title is also available as open access on Cambridge Core.

HUGH BOWDEN is Professor of Ancient History at King's College London. He is the author of books on the oracle of Delphi, ancient mystery cults and Alexander the Great. The main focus of his research is religious experience in the ancient world.

ESTHER EIDINOW is Professor of Ancient History at the University of Bristol. She works on ancient Greek culture and literature, especially religion and magic, and has published widely in this area. Most recently, she designed and led the Arts and Humanities Research Council-funded Virtual Reality Oracle project.

ANCIENT RELIGION AND COGNITION

Series Editors

ESTHER EIDINOW, *University of Bristol*
HUGH BOWDEN, *King's College London*

This series seeks to take advantage of a critical moment in the development of the study of ancient religion. This is one in which previous models (especially the sharp oppositions frequently drawn between ritual and belief, or between the social and the individual) are increasingly being questioned, and in which scholars of the ancient world are more and more drawing on cognitive approaches in the search for new paradigms. The 'cognitive science of religion' draws on insights developed in a wide range of fields: cognitive and evolutionary psychology, social anthropology, and neurobiology, amongst others. In essence, however, it seeks to understand religious experience as rooted in the ordinary cognitive capacities of the human brain. The series covers not only Greek and Roman religion but a range of ancient cultures from the Mediterranean and Near East, including Greece, Rome, Egypt, Babylonia, Persia, and Phoenicia, as well as cultures from Iron Age Europe. It will also explore the implications for the study of these cultures of a range of different cognitive approaches to religion and will include work by scholars from a wide range of disciplines in anthropology, the study of religion, evolutionary psychology, and neuroscience in addition to that by historians and archaeologists of the ancient world.

Titles in the series:

Cognitive Approaches to Ancient Religious Experience
ESTHER EIDINOW, ARMIN W. GEERTZ, AND JOHN NORTH

Senses, Cognition, and Ritual Experience in the Roman World
BLANKA MISIC AND ABIGAIL GRAHAM
