Dream Machine.

Rapid, Safe, Sterile Processing Was Once Just A Dream

STERIS SYSTEM 1™ has made the dream of rapid and safe sterile processing a reality.

STERIS SYSTEM 1 is the proven, low temperature sterile processing system for immersible surgical and diagnostic devices. Even delicate, heat sensitive scopes, cameras, instruments, and accessories can be safely sterilized in less than 30 minutes-Just In Time for each patient procedure.

STERIS SYSTEM 1 also provides peace of mind. There are no toxic fumes, and no disposal restrictions to lose sleep over. And liquid processing means that your devices can be sterilized without the drying and wrapping which are required with gaseous systems.

Write or call us today to learn why thousands of health professionals rest assured with the rapid and safe sterile processing of STERIS SYSTEM 1.

The STEM PROCESS™
The Proven Process
Just In Time

STERIS®

STERIS CORPORATION

Answers To Commonly Asked Questions About the STERIS PROCESS'"

LIQUID STERILE PROCESSING

Q. How does liquid sterile processing compare to other methods?

A. Regardless of the sterilization process, the item to be sterilized must be clean to ensure effective sterilization. The cleaning process is universally performed by washing an item with water. Gas sterilization technologies, such as Et0 and vaporized hydrogen peroxide, require that an item be completely dry before it is exposed to the sterilization process. This adds time, difficulty, and uncertainty-all negatives when a health professional is rushing to get ready to treat the next patient.

Since the STERIS PROCESS uses a liquid sterilant, it is equally effective on wet or dry items. This allows processing of items immediately after pre-cleaning without additional preparation. And since the STERIS PROCESS does not require wrapping and unwrapping of items, it eliminates many processing steps which are typically performed with gaseous systems, and allows sterilization with optimum efficiency and efficacy.

Liquid processing offers many other advantages as well. Liquid solutions are more easily directed than gases. This is especially important when processing sophisticated devices such as lumened endoscopes, which pose a challenge to chemical sterilization technologies. In addition, sterile processing with STERIS SYSTEM 1'" allows the user to see the gentle agitation of the liquid solution in action, without having to rely on complex monitoring systems to ensure that the sterilizing agents are present.

Q. How is the STERIS PROCESS different from other liquid processes?

A. The STERIS PROCESS uses STERIS 20™, a powerful chemical sterilant with a high degree of materials compatibility. The STERIS 20 formulation includes the active biocidal agent, peracetic acid, in combination with a proven chemical protection system. The ability to deliver anti-corrosives to all surfaces of a device is an important advantage of a liquid system.

The STERIS PROCESS is used in STERIS SYSTEM l-a complete sterile processing system. SYSTEM 1 provides automated and documented sterile processing in less than 30 minutes, so sterile devices are available Just In Time for each patient procedure.

Q. How is the STERIS 20 solution different from other solutions, like glutaraldehyde?

A. Glutaraldehyde solutions are typically used only to disinfect, not sterilize. These solutions are normally reused, allowing contamination and/or dilution. Unlike STERIS 20, glutaraldehyde cross links proteins, and therefore, can affix organic material to instrument surfaces. The STERIS 20 formulation, along with the directed flow of SYSTEM 1, makes the STERIS PROCESS more effective at reaching contaminated surfaces.

STERIS 20 does not have the same hazardous waste and worker exposure considerations as glutaraldehyde. The STERIS 20 use dilution is non-toxic and safely disposed in an ordinary drain during the standard processing cycle. In fact, it has passed the stringent fish toxicity tests required by the U.S. EPA and the State of California.

STERIS Corporation develops, manufactures, and markets sterile processing and infection prevention systems for the worldwide healthcare market. STERIS® is committed to providing products which improve patient and worker safety. If you would like more information about STERIS or STERIS SYSTEM 1, please write or call us at 1-800-JIT-4-USE (l-800-548-4873).

Techni-Care™ Surgical Scrub

99.99% Bacterial Reduction in only 30 seconds

Techni-Care...A new technology in a surgical scrub exhibits outstanding antimicrobial efficacy *without* dermal irritation.

Fully substantiated by independent testing in vivo and in vitro, Techni-Care Surgical Scrub both disinfects and conditions *in less time than any prior technology available to healthcare personnel.*

Results of Time Kill tests demonstrate that Techni-Care eliminates gram negative and gram positive bacteria at 99.99% in 30 second contact.

Outstanding Bactericidal Activity without skin irritation

Techni-Care's active ingredient, chloroxylenol (PCMX) at 3%, eliminates bacteria, while a host of skin conditioning agents work synergistically to condition and soften the skin. Exceptionally mild, Techni-Care's dermal conditioning ingredients, include cocamidopropyl PG-Dimonium Chloride Phosphate, Aloe Vera Gel, Collagen and Propylene Glycol.

Techni-Care has rated a "minimal irritation" in the Draize Dermal irritation test. Specially blended formulation for dermal conditioning, as well as for bacterial reduction. Techni-Care Surgical Scrub is soothing to dermal tissue while phospolipids promote natural turgor.

By adding 3 inches to our gloves, we've gone the extra mile when it comes to your protection.

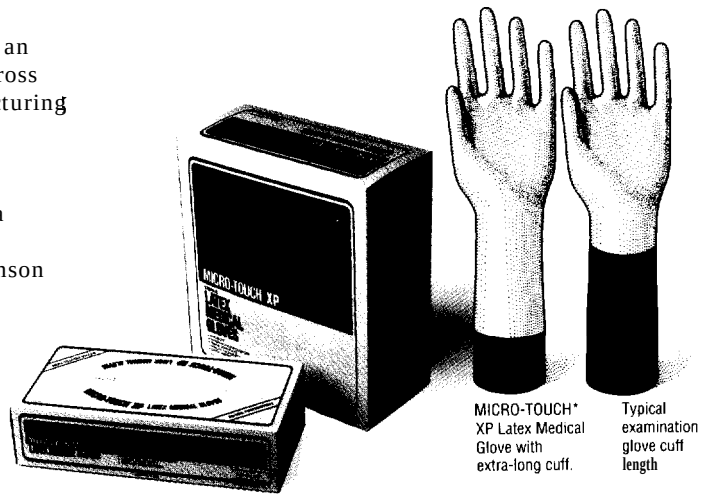

By adding an extra 3 inches to the cuffs of our MICRO-TOUCH* XP Latex Medical Gloves and insisting on 100 percent on-line visual inspection, we go the distance to assure you of extra protection and added strength. The kinds of quality you expect in Johnson &Johnson Medical, Inc. products.

Because your safety is important to us, we've added an extra 3 inches that can help prevent the possibility of cross contamination. Safety that is translated to our manufacturing process which produces gloves with quality standards that far exceed those required by the FDA.

That's important to you.

MICRO-TOUCH'" XP Medical Gloves, three extra inches, a lot more protection and added strength.

For more information contact your Johnson &Johnson Medical sales representative or call l-800-433-5009.

MICRO-TOUCH* XP Latex Medical Glove with extra-long cuff.
