THE REVIEW OF SYMBOLIC LOGIC
Volume 5, Number 3, September 2012

INTRODUCTION

The papers in this special issue derive from a conference on the topic of objectivity in mathematics, broadly construed. The conference was held at New York University in April 2009 and was organized by Shieva Kleinschmidt and myself. In addition to the authors whose work appears here, John Burgess, Kai Hauser, Peter Koellner, Stephen Simpson, and Hugh Woodin contributed talks at the conference.

I wish to thank all the speakers for making the conference possible. Thanks also to Timothy Bays, Russell Miller, John Morrison,and Jonas Reitz, for serving as session chairs at the conference. Thanks to Paul Boghossian, Hartry Field, Kit Fine, Don Garrett, Faith Gruelich, Peter Koellner, Anupum Mehrotra, Catherine Stimpson, the NYU Philosophy Department, the New York Institute of Philosophy, and the NYU Graduate School of Arts and Sciences for invaluable help orchestrating the conference. Thanks to Jeremy Avigad, Aldo Antonelli, Pen Maddy, and Stewart Shapiro for helping to make this volume a reality.
