

They show all the signs of having HIV.

There aren't any you can see, The truth is there is absolutely no way to tell from outward appearance who is infected with HIV, the vi-us that causes AIDS. So don't fool yourself.

How you act will determine your risk for HIV infection. There are some general rules. Never share drug needles or syringes. And unless you're sure your sex partner isn't infected, don't take a chance. Or at least use a latex condom, correctly, every single time you have sex.

Know how to determine your risk for HIV and AIDS. There is help available. Call your State or local AIDS hotline or the National AIDS Hotline at 1-800-342-AIDS. Call l-806243-7889 (TTY) for deaf access.

AMERICA RESPONDS TO AIDS

HIV is the virus that causes AIDS.

No more broken crit tubes.

The Little Red Box

Instead of glass tubes which can shatter, break and leak, you can use an unbreakable plastic microcuvette.

Instead of a noisy centrifuge, the HemoCue® Hemoglobin system gives you accurate hemoglobin values quietly.

Instead of taking 5 minutes for the hematocrit, the photometer measures your sample in less than **60** seconds.

For a limited time you can try this HemoCue® Hemoglobin system at no charge.

For more information, call 800-323-1674.
