# Part III

## Studying Sustainability Transitions

In Parts I and II, we have discussed key frameworks to conceptualize sustainability transitions, and we dove into the dimensions that shape how transition processes unfold. This Part III focuses on reflections and suggestions on how to study sustainability transitions. This part is not intended to provide concrete approaches of what one should do to study transitions, but rather on how to reflect upon the decisions that are being made while approaching questions relevant for sustainability transitions.

First, we'll dive more into the ontological and epistemological debates within sustainability transitions research. After that, we'll be engaging with questions about 'systems' and the role they play in research. Following, we'll stay with the systems, but take a closer look at system dynamics. Finally, this part ends with an engagement with reflexivity and (non-)neutrality in sustainability transitions research.
