Contents

Preface *page* xiii

1 Introduction 1
- 1.1 The interstellar journey starts 1
- 1.2 The dream of travelling to the stars 2
- 1.3 The scope of this book 3
- 1.4 Types of interstellar mission 3
- 1.5 Units used in this book 4
- 1.6 Chapter overview 5

2 Why travel to the stars? 8
- 2.1 Motivations 8
  - 2.1.1 General scientific considerations 8
  - 2.1.2 Non-scientific motivations 10
- 2.2 Stellar systems 11
- 2.3 Exoplanets 12
  - 2.3.1 Current status 12
  - 2.3.2 The circumstellar habitable zone 14
  - 2.3.3 What we can learn from an interstellar mission 16
- 2.4 Life 18
  - 2.4.1 What is life? 18
  - 2.4.2 Signatures of life 19
- 2.5 The nearest stars 21
  - 2.5.1 Planets around the nearest stars 23
  - 2.5.2 The Alpha Centauri system 25
- 2.6 Science on the way 27
- 2.7 Summary 29

3 Rockets 30
- 3.1 The rocket equation 30
- 3.2 Braking at the target star 32
- 3.3 The thrust equation 33
- 3.4 Travel time and distance for a constant mass rate 34
- 3.5 Specific impulse and effective exhaust velocity 37
- 3.6 Energy and energy efficiency 38
- 3.7 Power 39
- 3.8 Staging 40
- 3.9 Instantaneous rockets 42

3.10 Launching from the surface of a planet 43
3.11 Summary 46
3.12 Exercises 46

4 Orbital mechanics 48
4.1 Two-body motion under gravity: Keplerian orbits 48
4.1.1 All orbits 49
4.1.2 Elliptical orbits 50
4.1.3 Circular orbits 51
4.1.4 Escape velocity 52
4.1.5 Hyperbolic orbits 53
4.2 Changing orbits 55
4.2.1 Hohmann transfer 55
4.2.2 Other transfer orbits 57
4.2.3 The Oberth effect 58
4.3 Gravity assists 59
4.3.1 Concept 60
4.3.2 Gravity assists on real bodies 63
4.4 Summary 65
4.5 Exercises 66

5 Thermal rockets 67
5.1 Rocket thermodynamics 67
5.2 The convergent–divergent nozzle 70
5.3 The rocket as a heat engine 75
5.4 Chemical rockets 76
5.4.1 Liquid fuels 77
5.4.2 Solid fuels 79
5.5 Real rockets 80
5.6 Summary 82
5.7 Exercises 82

6 Ion engines 83
6.1 Principle 83
6.2 Power, potential, and propellant 87
6.3 An example application: Dawn 88
6.4 Other types of ion engine 91
6.5 Summary 92
6.6 Exercises 92

7 Relativistic motion 93
7.1 Basic relations 93
7.2 Lorentz transformations 94
7.3 Constantly accelerating spacecraft 97
7.4 Force and Newton's second law 100
7.5 The relativistic rocket equation 101

Downloaded from https://www.cambridge.org/core. UNIVERSIDAD AUTONOMA METROPOLITANA, on 16 Nov 2026 at 07:03:21, subject to the Cambridge Core terms of use, available at https://www.cambridge.org/core/terms. https://doi.org/10.1017/9781009700429

7.6 A trip to Alpha Centauri 103
7.6.1 The twin paradox 105
7.7 Photon rockets 106
7.8 Mixed matter–photon rockets 107
7.8.1 Effective exhaust velocity 109
7.8.2 Mass losses 110
7.8.3 Energy efficiency 111
7.9 Summary 113
7.10 Exercises 114

8 Nuclear rockets 115
8.1 Nuclear binding energy 115
8.2 Nuclear fission 116
8.3 Fission rockets 120
8.3.1 Thermal fission rockets 120
8.3.2 Fission fragment rockets 122
8.3.3 Fission pulse rockets 125
8.4 Magnetic nozzles 127
8.5 Nuclear fusion 128
8.5.1 Reactions for rockets 131
8.5.2 Effective exhaust velocities 134
8.6 Fusion pulse rockets 134
8.7 Other fusion propulsion schemes 137
8.8 Antimatter propulsion 139
8.8.1 Main reactions 139
8.8.2 Use in a rocket 140
8.8.3 Thrust augmentation 143
8.8.4 Practicalities 145
8.9 Summary 146
8.10 Exercises 147

9 Relativistic optical effects 148
9.1 Source direction and size: aberration 148
9.2 Source frequency and wavelength: the Doppler effect 153
9.3 Source brightness 156
9.4 Summary 158
9.5 Exercises 158

10 Solar sails 159
10.1 Radiation pressure 159
10.2 Forces on a sail 160
10.3 Solar sail orbits 162
10.3.1 The sail pointed at the Sun: Keplerian orbits 162
10.3.2 The sail inclined: non-Keplerian orbits 163
10.4 Imperfectly reflecting sails 164
10.5 Sail materials 166

Downloaded from https://www.cambridge.org/core. UNIVERSIDAD AUTONOMA METROPOLITANA, on 16 Nov 2026 at 07:03:21, subject to the Cambridge Core terms of use, available at https://www.cambridge.org/core/terms. https://doi.org/10.1017/9781009700429

10.6 Missions 171
10.6.1 IKAROS 172
10.6.2 Interstellar mission concepts 173
10.7 The sundiver 173
10.8 Summary 176
10.9 Exercises 176

11 Laser sails 177
11.1 Relativistic kinematics of a laser sail 177
11.1.1 Reflection of photons off a relativistic sail 177
11.1.2 Energy efficiencies for perfect reflection 180
11.1.3 The equation of motion 181
11.1.4 The solution of the equation of motion 184
11.1.5 The power received by the sail 187
11.2 Optics and arrays 188
11.2.1 Diffraction 188
11.2.2 Aperture synthesis 190
11.2.3 Atmospheric distortion and adaptive optics 192
11.3 Lasers 195
11.3.1 How much power? 195
11.3.2 Arrays of lasers 196
11.4 Sail structure 197
11.4.1 Materials 197
11.4.2 Shape and stability 199
11.5 Lasers in space 201
11.6 Laser sail missions 203
11.6.1 High-mass payloads 203
11.6.2 Low-mass payloads 204
11.6.3 Intermediate-mass payloads 204
11.6.4 Using a light sail to brake at the target system 206
11.7 Summary 208
11.8 Exercises 209

12 The interstellar medium 210
12.1 The solar system 210
12.2 The solar wind and its interaction with the interstellar medium 211
12.3 Composition of the interstellar medium 213
12.3.1 Atoms, ions, and electrons 213
12.3.2 Molecules, dust, and rocks 215
12.3.3 Cosmic rays and magnetic fields 217
12.4 Impacts on a spacecraft 217
12.4.1 Collision rates 217
12.4.2 Damage by atoms and ions 218
12.4.3 Damage by dust 221
12.4.4 Implications for spacecraft design 224
12.5 Drag on a spacecraft 226

Downloaded from https://www.cambridge.org/core. UNIVERSIDAD AUTONOMA METROPOLITANA, on 16 Nov 2026 at 07:03:21, subject to the Cambridge Core terms of use, available at https://www.cambridge.org/core/terms. https://doi.org/10.1017/9781009700429

12.6 The Bussard ramjet 227
12.6.1 Principle 227
12.6.2 A ramjet's journey 231
12.6.3 Challenges 234
12.7 Summary 235
12.8 Exercises 236

13 Magnetic and electric sails 237
13.1 Magnetic sails 237
13.1.1 Concept 237
13.1.2 Application 239
13.1.3 Other magnetic sail concepts 242
13.2 Electric sails 243
13.2.1 Combining magnetic and electric sails 247
13.3 Summary 248
13.4 Exercises 248

14 Navigation 249
14.1 The need for navigation 249
14.2 Inertial navigation 250
14.2.1 Accelerometers 250
14.2.2 Gyroscopes and orientation 252
14.2.3 Clocks 253
14.2.4 Use in space travel 254
14.3 Navigation in the solar system by ranging 254
14.4 Stellar astrometric navigation 257
14.4.1 Principle 257
14.4.2 Implementation and simulation results 259
14.5 Pulsar navigation 263
14.5.1 Pulsars 263
14.5.2 Navigation principle 265
14.5.3 Application within the solar system 268
14.5.4 Pulsars for interstellar navigation 270
14.6 Relation to global navigation satellite systems 271
14.7 Spacecraft control 274
14.8 Summary 274
14.9 Exercises 275

15 Communication 276
15.1 Requirements and issues 276
15.2 Power received: the Friis transmission equation 277
15.2.1 A relativistic correction 279
15.3 Spacecraft pointing accuracy 280
15.4 Modulation 281
15.5 Noise 283
15.6 Contaminating light from the target star 285

Downloaded from https://www.cambridge.org/core. UNIVERSIDAD AUTONOMA METROPOLITANA, on 16 Nov 2026 at 07:03:21, subject to the Cambridge Core terms of use, available at https://www.cambridge.org/core/terms. https://doi.org/10.1017/9781009700429

15.7 Communication in the presence of noise 288
15.7.1 Example error-correcting code: repetition coding 289
15.7.2 Channel capacity from the Shannon–Hartley theorem 291
15.7.3 Channel capacity at low photon rates 294
15.8 Choice of wavelength and location of receiver 297
15.8.1 Absorption and emission from the Earth's atmosphere 297
15.8.2 Receivers in space 299
15.8.3 Technological issues affecting the choice of wavelength 300
15.9 Case studies 302
15.10 Summary 304
15.11 Exercises 305

16 Payloads 306
16.1 Scientific instruments 306
16.2 Power 312
16.3 Relays and swarms 315
16.4 Autonomous control 317
16.5 Summary 318
16.6 Exercises 319

17 Outlook 320
17.1 The edge of physics 320
17.1.1 Warp drives 320
17.1.2 Wormholes 321
17.1.3 Other ideas 321
17.2 Challenges and solutions 322
17.3 Broader issues of interstellar travel 324
17.4 Where do we go from here? 326

Appendix A Further reading 329
A.1 Introduction 329
A.2 Why travel to the stars? 329
A.3 Rockets 330
A.4 Orbital mechanics 331
A.5 Thermal rockets 331
A.6 Ion engines 331
A.7 Relativistic motion 331
A.8 Nuclear rockets 332
A.9 Relativistic optical effects 333
A.10 Solar sails 333
A.11 Laser sails 334
A.12 The interstellar medium 335
