NOW, FOR THE HIGH RISK OF CV CATHETER RELATED INFECTION, THERE'S THE HIGHER REWARD OF INFECTION CONTROL.

Maintaining the delicate balance of the patient at high risk of infection is the concern of all in critical care medicine. For the immuno-compromised or high-risk patients, infection can be life-threatening. And for everyone involved, infection is very expensive.

Now Becton Dickinson Critical Care Monitoring answers your concerns about catheter related infection with the first short term CV catheter featuring built-in infection control. Only Safe-Dwel" catheters from Becton Dickinson come complete with VitaCuff†, the antimicrobial collagen cuff clinically proven to dramatically reduce catheter related infections. That means significant care and cost advantages.

The next time the risk of infection is high, choose the higher rewards of effective infection control. Choose Safe-Dwel CV catheters with VitaCuff from Becton Dickinson.

INTRODUCING

The Berkeley™ SafeTouch™ Collection System

One More Protective Barrier Between You and Infectious Disease

The risk of exposure to deadly viruses such as AIDS and Hepatitis B is a serious concern to healthcare workers. As a result, there's always a need for one more protective barrier in the operating room.

Now, Cabot Medical has introduced a completely secure and disposable closed containment unit for vacuum curettage procedures. It's called the Berkeley SafeTouch Collection System.

This uniquely-designed product effectively isolates suctioned tissue from body fluids in a patented tissue trap, eliminating the need to handle bloody gauze sacks. The separate fluid collection container is made of unbreakable plastic for safe disposability away from patient care areas. So, there's no more messy washing of bottles and lids, with possible exposure to contaminants.

The Berkeley SafeTouch System offers these additional benefits in vacuum curettage collection:

- see-through tissue trap permits easy visualization and identification of tissue
- securely sealed system for safe transport
- compatibility with most vacuum curettage machines

When it comes to your safety in the workplace, you don't want to take chances. The Berkeley SafeTouch Collection System provides a safe, disposable solution for vacuum curettage containment. It's an important protective barrier between you and infectious disease.

For more information on this unique product, call, Fax, or write to Nancy Benowitz, today.
