The Latest On USED AND REUSED

EPA ACCEPTED: For complete disinfection (including T.B. activity)

**"SPORICIDIN, DILUTED 1:16, IS TUBERCULOCIDAL
USED AND RE-USED FOR 30 DAYS FOR 100% HOSPITAL LEVEL
DISINFECTION IN 10 MINUTES AT TRUE ROOM TEMPERATURE
ROOM TEMPERATURE,
68°F AND ABOVE•** (REG. #8383-5)."

Important Product Information:

Sporicidin is the **ONLY** dilutable glutar aldehyde-based 10 minute disinfectant that is registered for tuberculocidal re-use without heating Respiratory and other equipment were used in the **Studies** supporting the re-use claims. It is recommended for respiratory therapy and operating room instruments and equipment.

Sporicidin is recommended by all major scope manufacturers.

****Cidex now must be heated to 77°F / 25°C for 45 minutes for tuberculocidal activity.** Cidex, and Cidex type products, require a much higher glutaraldehyde concentration (2%) for disinfection and are less effective than Sporicidin, a glutaraldehyde (0.13%)-phenate Complex.

Under the most stringent and scientific guidelines, Sporicidin is the best sterilizing/disinfecting product available.

For years you've protected your patients from infectious disease.

Now there's extra protection for your staff.

The threat of contamination from infectious disease increases daily. To help you safeguard your staff, General Medical presents its line of Personnel Protection Products. Hundreds of items for clinical, procedural and emergency situations, from coveralls to gowns... splash protection goggles to bootcovers...sharps containers to an AIDS contamination kit.

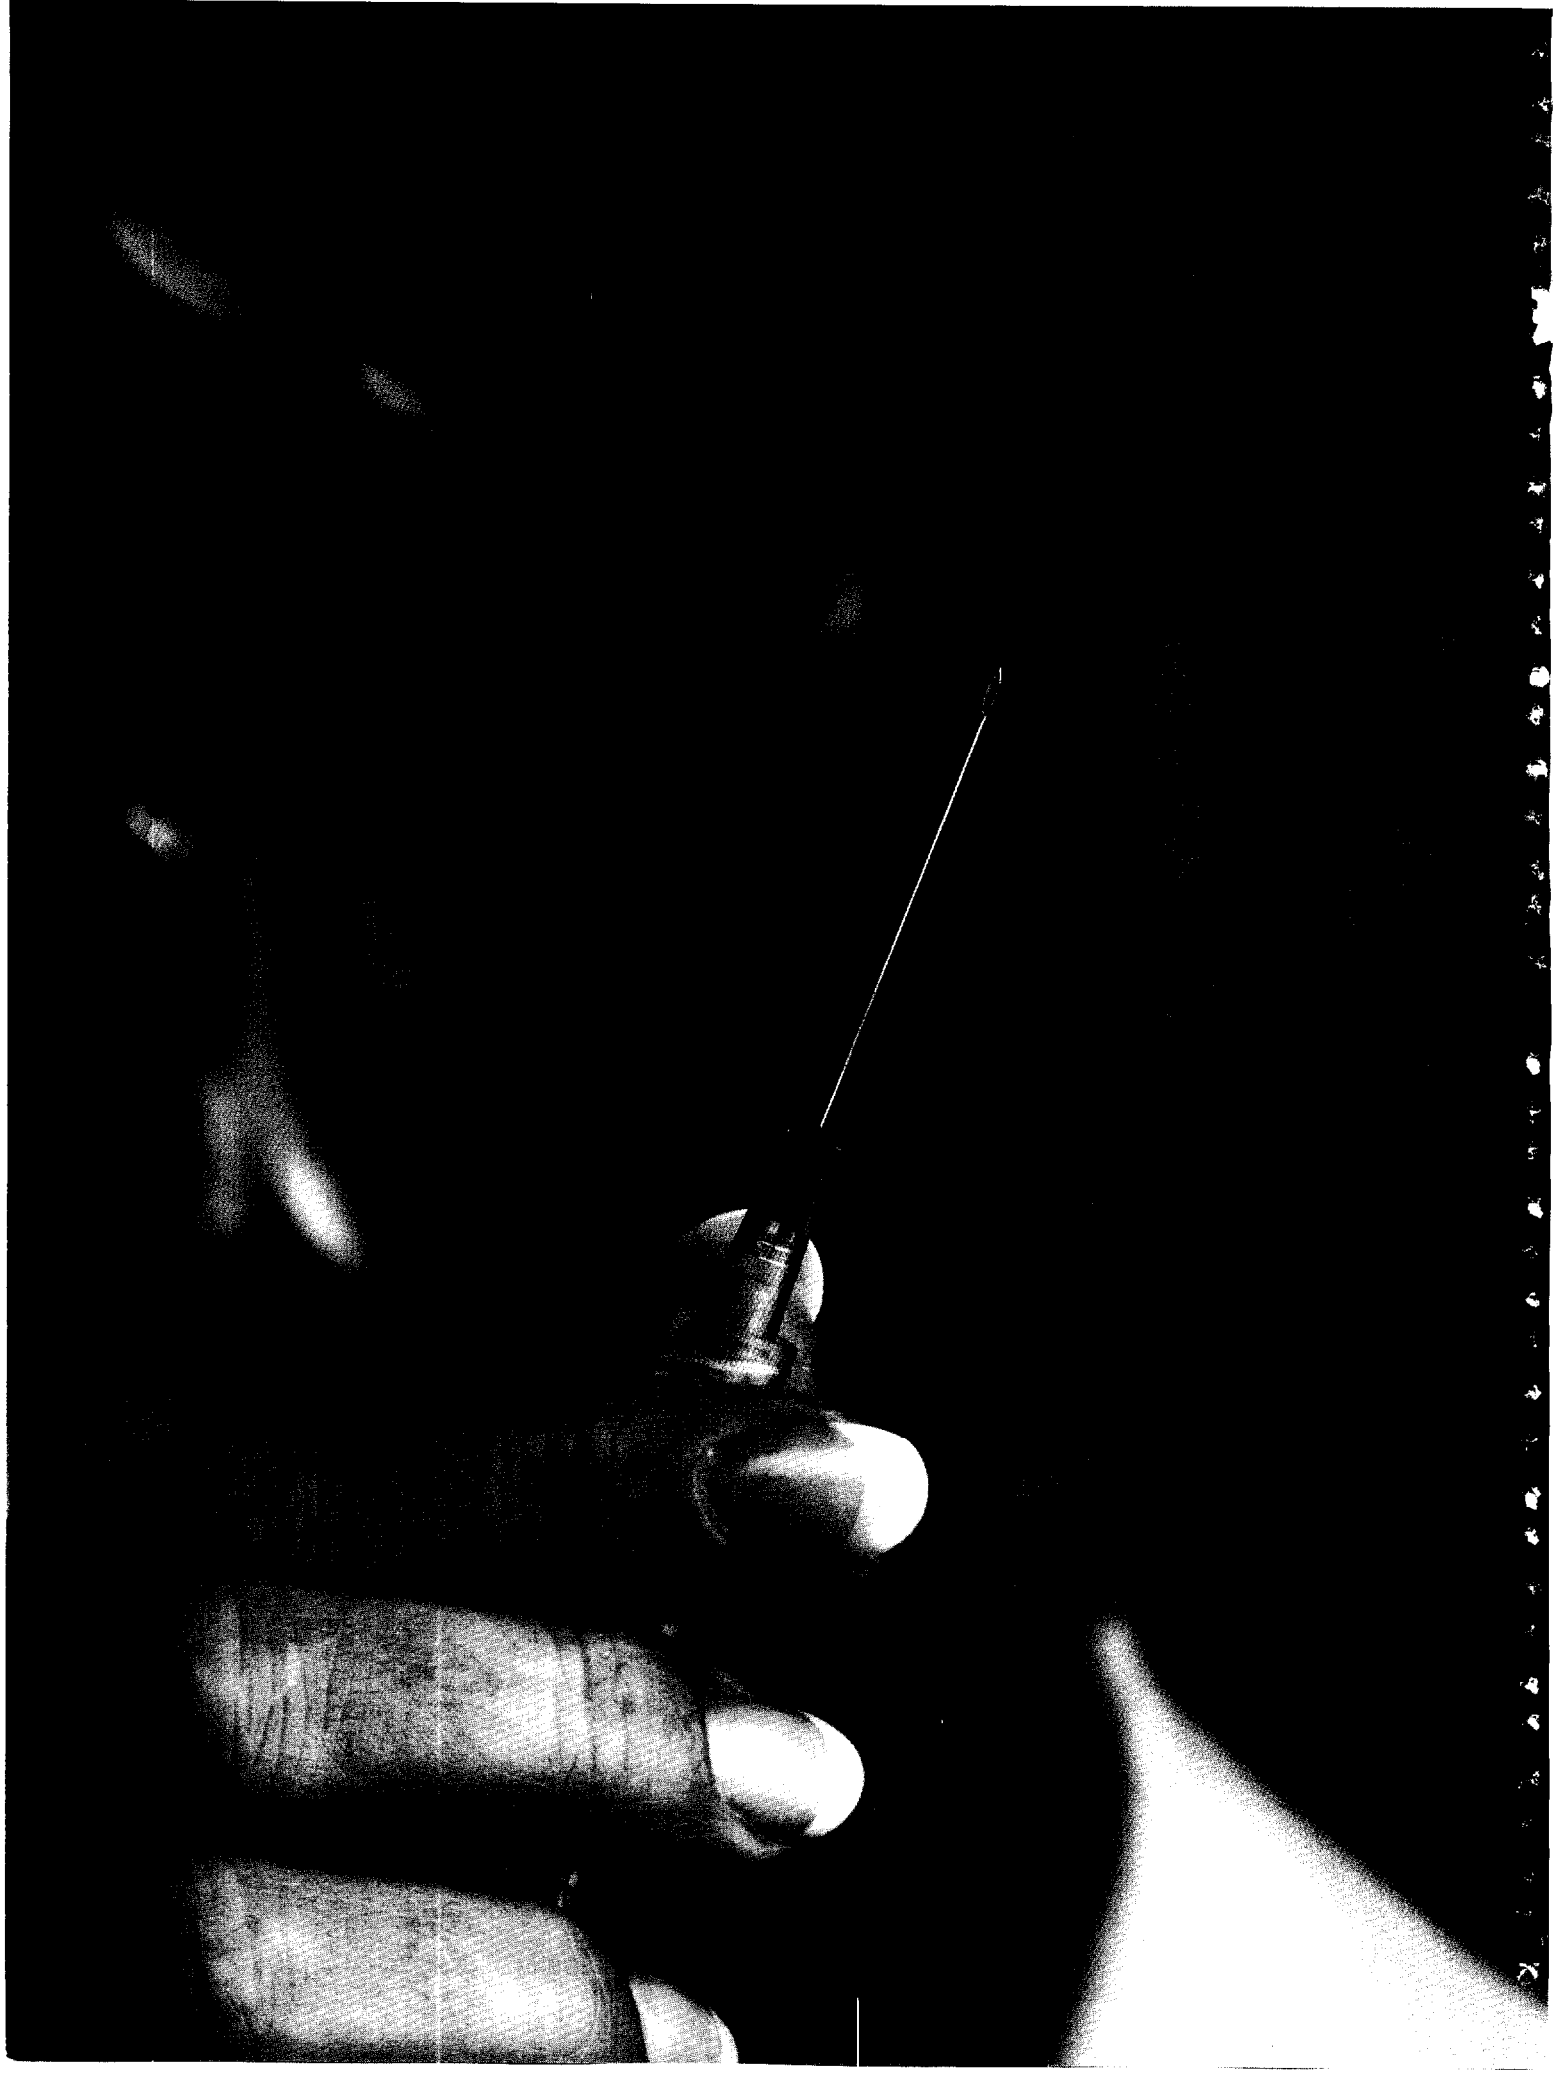

Provide your staff with extra protection. Provide General Medical's Personnel Protection Products.

Ask your General Medical representative for our free catalog of Personnel Protection Products. For the phone number of your nearest General Medical location call toll free, 1-800-446-3008. In Virginia call collect (804) 780-2653.

The ICU HR Needle helps eliminate the cost, liability, and anxiety of accidental needle sticks.

1. *The HR Needle accommodates any standard slip or luer lock syringe.*
2. *Administer injection following normal hospital procedure.*
3. *To remove the HR Needle-assembly, grasp the plastic guard firmly with one hand. Then withdraw the syringe with the other hand until the guard clicks in place.*
4. *The HR Needle is now safe for disposal, recessed within the protective guard.*

Today's healthcare professional is concerned about infectious diseases. Through on-the-job exposure to high-risk patients, medical personnel are more likely to contract AIDS, Hepatitis B, and non-A, non-B Hepatitis than any other working group.

Accidental needle sticks account for nearly ⅓ of healthcare cases. Last year, there were ***800,000 reported needle stick injuries*** resulting in expenses of over ***$500 million*** for accident work-ups alone. Liability and treatment for infected individuals drove the totals into the billions of dollars.

Now, there's a standard of protection from accidental needle sticks—the HR Needle from ICU Medical. The HR Needle helps eliminate the possibility of needle-stick injuries, and prevents the needless transmission of infectious diseases.

The HR Needle is the healthcare worker's first line of defense, reducing the liability *and* the anxiety of dealing with high-risk patients.

ICU—A New Standard in Protection

ICU Medical is committed to manufacture products designed to reduce the liability, costs and anxiety encountered by today's medical professionals.

For further information or product demonstration, contact your local Baxter Hospital Supply Division representative or call ICU MEDICAL, INC. at:
