Mooring the Global Archive

Martin Dusinberre follows the *Yamashiro-maru* steamship across Asian and Pacific waters in an innovative history of Japan's engagement with the outside world in the late nineteenth century. His compelling in-depth analysis reconstructs the lives of some of the thousands of male and female migrants who left Japan for work in Hawai'i, Southeast Asia and Australia. These stories bring together transpacific historiographies of settler colonialism, labour history and resource extraction in new ways. Drawing on an unconventional and deeply material archive, from gravestones to government files, paintings to song, and from digitized records to the very earth itself, Dusinberre addresses key questions of method and authorial positionality in the writing of global history. This engaging investigation into archival practice asks, what is the global archive, where is it cited, and who are 'we' as we cite it? This title is also available as Open Access on Cambridge Core.

Martin Dusinberre is Professor of Global History at the University of Zurich.

Cambridge Oceanic Histories

Edited by

David Armitage
Renisa Mawani
Sujit Sivasundaram

Across the world, historians have taken an oceanic turn. New maritime histories offer fresh approaches to the study of global regions, and to long-distance and long-term connections. Cambridge Oceanic Histories includes studies across whole oceans (the Pacific, the Indian, the Atlantic) and particular seas (among them, the Mediterranean, the Caribbean, the North Sea, the Black Sea). The series is global in geography, ecumenical in historical method, and wide in temporal coverage, intended as a key repository for the most innovative transnational and world histories over the longue durée. It brings maritime history into productive conversation with other strands of historical research, including environmental history, legal history, intellectual history, labour history, cultural history, economic history and the history of science and technology. The editors invite studies that analyse the human and natural history of the world's oceans and seas from anywhere on the globe and from any and all historical periods.
