Figures

2.1 The knowledge commons–environmental commons relationship. *page* 27
3.1 Human Impact Unit (Hu) normalization formula. 64
3.2 Hu valuation, in US dollars, probability density function and cumulative density function as of June 2024. 66
3.3 Example of the four components that make up a RAC contract: RTA, SOAO, RVD, and redacted evidence. 67
3.4 Process and technology involved in the creation of a RAC. 70
3.5 Structure of the Trokt network governance architecture. 71
3.6 Example of a GreaseTrack quality label that displays the probability of any specific collection event being contained in the total quantity shipped. 76
4.1 The generic Governing Knowledge Commons framework. 88
4.2 Action situation in the Governing Knowledge Commons framework (same as the Institutional Analysis and Development framework). 88
4.3 Institutional analysis of the physical commons for stormwater. 91
4.4 Annotated action situation for green stormwater infrastructure in Detroit, Michigan. 92
4.5 Net present values for fourteen green stormwater infrastructure practices in Detroit, Michigan. 93
4.6 The bioinfiltration/rain garden construction at Sacred Heart Church, Detroit, Michigan. 94
4.7 Geographic distribution of GSI practices in Detroit, Michigan. 96
4.8 Knowledge commons for GSI. 97
4.9 Summary of the stormwater knowledge commons action situation. 99
5.1 Regions covered by expert assessments in Jordan. 114
5.2 Monitoring institutional response to climate change-induced trade-offs. 117
