Topics range from the epidemiology of disaster response, disaster ecology, the neurobiology of disaster exposure, to socio-cultural issues, early intervention and consultation-liaison care for injured victims. The role of non-governmental organizations, workplace policies and the implications for public health planning at both an individual and community level are also addressed.

- The comprehensive examination of disaster and its impact gives the book both clinical and public health relevance
- The text has been updated to cover a decade of advances, leading to more effective approaches to preparation, treatment, intervention and therefore recovery
- Concepts and approaches are applied to worldwide needs, resulting in a text relevant to real life practice
