The Kuroshio Frontier

This big-picture narrative of modern Japan embeds the archipelago's history in its maritime context. Foregrounding the Kuroshio Current in the Pacific, Jonas Rüegg demonstrates how currents, winds, and animals created a dynamic context to economic, intellectual, and geopolitical reinventions of Japan over the past four centuries. He draws up a novel geography of conflicts and competitions in the making of "modern" Japan, one that underlines little known actors, sites, and events which have previously been treated as peripheral. This book offers a framework that transcends conventional spatial and temporal categorizations of early modern and modern, shogunal and imperial, insular and global. Guiding the reader from seventeenth-century Pacific explorations to the "opening" of Japan by whalers, coolies, and castaways, and on to the competition over remote islands, Rüegg offers a greater perspective on the role of oceans in the Anthropocene. This title is also available as Open Access on Cambridge Core.

Jonas Rüegg teaches global history at the University of Zurich, Switzerland.

CAMBRIDGE OCEANIC HISTORIES

Edited by
David Armitage
Renisa Mawani
Sujit Sivasundaram

Across the world, historians have taken an oceanic turn. New maritime histories offer fresh approaches to the study of global regions, and to long-distance and long-term connections. Cambridge Oceanic Histories includes studies across whole oceans (the Pacific, the Indian, the Atlantic) and particular seas (among them, the Mediterranean, the Caribbean, the North Sea, the Black Sea). The series is global in geography, ecumenical in historical method, and wide in temporal coverage, intended as a key repository for the most innovative transnational and world histories over the longue durée. It brings maritime history into productive conversation with other strands of historical research, including environmental history, legal history, intellectual history, labour history, cultural history, economic history and the history of science and technology. The editors invite studies that analyse the human and natural history of the world's oceans and seas from anywhere on the globe and from any and all historical periods.
