If the blue one protected 4 times better, would you use it?

When a risk arises, it's not a question of if you should protect yourself but how to best protect yourself.

With costly central venous catheter-related infections occurring at a rate of 3% to 12%, and an associated mortality rate of 20%,[1] the risks are real.

ARROWg+ard Blue"' is your best defense against infection.

CVC catheters with the built-in protection of ARROWg+ard Blue'" are up to 80% less likely to develop bacteremia than unprotected catheters! So you can save up to 80% of your CVC patients from the risk of a catheter-related bloodstream infection. And you can save your hospital from the expense of $7,000 per infection.

To learn about all the benefits of ARROWg+ard Blue'" catheters, **contact** your Arrow representative or call 1 800 523-8446.
