Abricot

Jean Lichou, Michel Jay

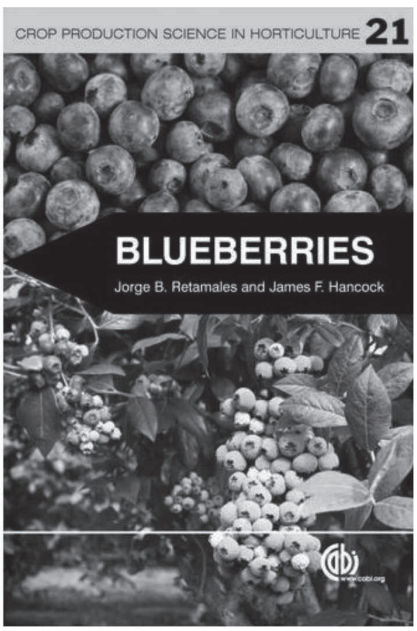

En dix chapitres, cette nouvelle monographie *Abricot* (la précédente date de 1989), fait le point sur tous les aspects de la culture : économie du produit, origine, distribution géographique et biologique de l'espèce, conduite et protection du verger, élaboration du fruit, maintien et perception de la qualité.

Blueberries

J.B. Retamales, J.F. Hancock

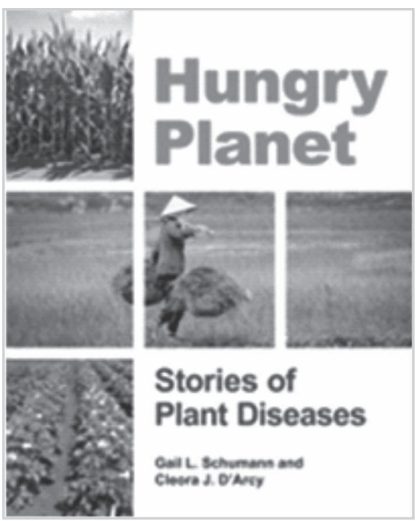

Blueberry cultivation has increased dramatically as production has shifted into new regions. Blueberries are now widely available as food and also processed to be used in medicine and pharmaceuticals for their antioxidant properties. This new and practical book covers the major topics of interest to blueberry breeders and researchers including botany, physiology, nutrition, growth regulation, photosynthesis, environment, weeds, pests, diseases and postharvest management. The main focus is on the most important cultivated species, the highbush blueberry, although information on other blueberries and related species is also provided. It is an essential resource for soft fruit researchers, extension workers, academics, breeders, growers, and students.

Hungry Planet: Stories of Plant Diseases

Gail L. Schumann, Cleora J. D'Arcy

This comprehensive book tells the stories of plant pathology with a passionate voice and laces each tale with the essential research-based information to help readers understand the interrelationship between agriculture, the human condition, and the science that connects the two. The book examines the effects plant diseases have had on human culture by weaving together true-life tales from ancient days and modern times. *Hungry Planet* explores sometimes controversial topics that challenge readers to think beyond the disease outbreaks to consider the impact these biological events have on our personal lives. Anyone interested in science, environmental issues, food production, or sustainability will find the book fascinating.
