KATHERINE V. FITE, *University of Massachusetts, Amherst*

Visual Neuroscience (ISSN 0952-5238) publishes experimental and theoretical studies concerning the neural mechanisms of vision. Contributions may deal with molecular, cellular, and systems-level processes in both vertebrate and invertebrate species. Studies based exclusively on clinical, psychophysical, or behavioral data will be considered if they are related to neural mechanisms. Appropriate research areas include: photoreception and transduction, subcortical visual pathways, developmental processes, visually guided behavior, retinal structure and function, cortical mechanisms, oculomotor control, and substrates of perception.

Visual Neuroscience features full-length research papers, short communications, and review articles that critically examine topics related to the journal's principal focus.

Visual Neuroscience is indexed in Current Contents/Life Sciences; Science Citation Index; MEDLINE; Ocular Resources Review; Neuroscience Citation Index; and in the SCISEARCH and ISI/BIOMED databases.

Editorial Office: Benjamin E. Reese, Editor, *Visual Neuroscience,* University of California at Santa Barbara, Neuroscience Research Institute and Department of Psychology, Santa Barbara, CA 93106-5060, USA. Telephone/Fax: (805) 893-2091. E-mail: vns@lifesci.ucsb.edu

Publishing, Subscription and Advertising Offices: Cambridge University Press, 32 Avenue of the Americas, New York, NY 10013-2473, USA; and (outside the US and Canada) Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 8RU, England.

Published Bimonthly. Annual rates for institutions print and electronic: US $1541.00 in the US, Canada, and Mexico; UK £885.00 + VAT elsewhere. Institutions electronic only: US $1274.00 in the US, Canada, and Mexico; UK £735.00 + VAT elsewhere. Institutions print only: $1402.00 in the US, Canada, Mexico; UK £813.00 + VAT elsewhere. Individuals print plus electronic: US $356.00 in the US, Canada, and Mexico; UK £205.00 + VAT elsewhere. Individuals print only: US $334.00 in the US, Canada, and Mexico; UK £190.00 + VAT elsewhere. Students: US $102.00 in the US, Canada, and Mexico; UK £74.00 + VAT elsewhere. For members of the Society for Neuroscience, Association for Research in Vision, and Ophthalmology, European Society for Neuroscience: US $170.00 in the US, Canada, Mexico; UK £110.00 + VAT elsewhere. Prices include postage and handling.

Visual Neuroscience is part of the **Cambridge Journals Online (CJO)** service. Access to online tables of contents and article abstracts is available to all researchers at no additional cost. Access to full text articles online is currently included with the cost of print and electronic subscription. Subscription must be activated: for detail see http://www.journals.cambridge.org.

No part of this publication may be reproduced, in any form or by any means, electronic, photocopy, or otherwise, without permission in writing from Cambridge University Press. For further information see http://us.cambridge.org/information/rights/ or http://www.cambridge.org/uk/information/rights/. Photocopying information for users in the U.S.A.: The Item-Fee Code for this publication (0952-5238/11 $25.00) indicates that copying for internal or personal use beyond that permitted by Sec. 107 or 108 of the U.S. Copyright Law is authorized for users duly registered with the Copyright Clearance Center (CCC) provided that the appropriate remittance of $25.00 per article is paid directly to: CCC, 222 Rosewood Drive, Danvers, MA 01923. Specific written permission must be obtained for all other copying.

Printed in the United States of America.

Periodicals postage paid at New York, NY, and additional mailing offices. Postmaster: send address changes in the US and Canada to: *Visual Neuroscience.,* Journals Department, Cambridge University Press, 100 Brook Hill Drive, West Nyack, NY 10994-2133.

About the Cover. Alan Springer and colleagues document the late packing of cones and the subsequent rapid emergence of peak cone density in the marmosetís retina at the incipient fovea in their study in the present issue.
