Monopolizing Knowledge

In the nineteenth century, an ambitious new library and museum for Asian arts, sciences and natural history was established in the City of London, within the corporate headquarters of the East India Company. Funded with taxes from British India and run by the East India Company, this library-museum was located thousands of miles away from the taxpayers who supported it and the land from which it grew. Jessica Ratcliff documents how the growth of science at the Company depended upon its sweeping monopoly privileges and its ability to act as a sovereign state in British India. She explores how "Company science" became part of the cultural fabric of science in Britain and examines how it fed into Britain's dominance of science production within its empire, as well as Britain's rising preeminence on the scientific world stage. This title is part of the Flip it Open program and may also be available open access. Check our website Cambridge Core for details.

Jessica Ratcliff is a historian in the Department of Science and Technology Studies at Cornell University. She is the author of *The Transit of Venus Enterprise in Victorian Britain* (2008).

Science in History

Series Editors

Lissa Roberts, University of Twente
Simon J. Schaffer, University of Cambridge
James A. Secord, University of Cambridge

Science in History is a major series of ambitious books on the history of the sciences from the mid eighteenth century through the mid twentieth century, highlighting work that interprets the sciences from perspectives drawn from across the discipline of history. The focus on the major epoch of global economic, industrial and social transformations is intended to encourage the use of sophisticated historical models to make sense of the ways in which the sciences have developed and changed. The series encourages the exploration of a wide range of scientific traditions and the interrelations between them. It particularly welcomes work that takes seriously the material practices of the sciences and is broad in geographical scope.
