Cambridge Prisms

OPEN ACCESS

COASTAL FUTURES

EDITOR-IN-CHIEF:
Prof. Tom Spencer, *Emeritus Professor of Cambridge University UK*

Cambridge Prisms is a series of journals dedicated to addressing real-world challenges. *Coastal Futures* is one of the titles in the series.

Coastal Futures explores all aspects of coastal systems, their complexity and how they change over time. It reports on the interactions between physical, biological and social elements and processes, which are unique to coastal regions and which influence, or are influenced by, the coast.

In particular, the journal is interested in the dynamics of these interactions and their indications for the future. The scope includes research from within and across the disciplines of physics, chemistry, biology, engineering, human geography, social sciences and law, structured around a layer of authoritative commissioned review content.

THE SCOPE COVERS, BUT IS NOT LIMITED TO:

- Engineering
- Climate change
- Blue Economy
- Coastal Development
- Monitoring
- Conservation, Restoration, and Nature-based Solutions
- Society and Culture
- Governance
- Geomorphology
